Natural Philosophy Epitomised: Books 8-11 of Gregor Reisch's Philosophical pearl (1503) Sachiko Kusukawa,2017-03-02 Gregor Reisch s The Philosophical pearl Margarita Philosophica first published in 1503 and republished 11 times in the sixteenth century was the first extensive printed text which discussed the disciplines taught at university to achieve widespread dissemination This distinguishes it from printed editions of individual texts of Aristotle and other authorities It is presented as a dialogue between master and pupil covering the seven liberal arts natural philosophy and moral philosophy and with illustrations throughout It has received remarkably little attention in its own right as a work of education which helped shape the world view of sixteenth century educated men Its author was a Carthusian monk This volume presents an edited translation and an extensive introduction of the four books which deal with natural philosophy the predecessor of modern science These books clearly show the extent to which for Reisch the study of nature was still primarily undertaken for Christian ends Not only was nature studied as God s creation but the study of the soul a central part of natural philosophy pursued on Aristotelian lines and its fate was here completely integrated with the salvation or damnation of the individual Christian as taught in the Bible and by the church fathers especially Augustine Natural philosophy for Reisch was a discipline which was as concerned with God and the Bible as it was with Nature and Aristotle

Putting Ourselves Back in the Equation George Musser,2023-11-07 This is a delightful account of one of the deepest and most fascinating explorations going on today at the frontier of our knowledge Carlo Rovelli bestselling author of The Order of Time and Seven Brief Lessons on Physics Musser knows that the point of popular science is to get a sense of what s at stake what kinds of answers are being offered to difficult questions and why it all matters One could not ask more of Putting Ourselves Back in the Equation on all three counts it delivers Julian Baggini The Wall Street Journal A revelatory

exploration of how a theory of everything depends upon our understanding of the human mind The whole goal of physics is to explain what we observe For centuries physicists believed that observations yielded faithful representations of what is out there But when they began to study the subatomic realm they found that observation often interferes with what is being observed that the act of seeing changes what we see The same is true of cosmology our view of the universe is inevitably distorted by observation bias And so whether they re studying subatomic particles or galaxies physicists must first explain consciousness and for that they must turn to neuroscientists and philosophers of mind Neuroscientists have painstakingly built up an understanding of the structure of the brain Could this help physicists understand the levels of self organization they observe in other systems These same physicists meanwhile are trying to explain how particles organize themselves into the objects around us Could their discoveries help explain how neurons produce our conscious experience Exploring these questions and more George Musser tackles the extraordinary interconnections between quantum mechanics cosmology human consciousness and artificial intelligence Combining vivid descriptive writing with portraits of scientists working on the cutting edge Putting Ourselves Back in the Equation shows how theories of everything depend on theories of mind and how they might be one and the same *Catalog of Copyright Entries.
