discipline to that of traditional historical archaeology. Once considered the pursuit of learned history professors and their disciples, today military archaeology has flourished around the world into what can only best be described as a hugely popular pastime and in some instances a multi million pound business. With technologies available today, even the student on the most modest of budgets can become an archaeologist if only in the layman's term. Yet despite its popularity in unearthing answers to the questions of our turbulent past, there are surprisingly few texts available on what is arguably a fascinating and historically important subject. The objective herein is to present an analysis of various battles fought around the world from medieval times to the present and the archaeology recovered from investigations carried out by professionally sanctioned groups and hobbyists. The context here includes general battlefield recovered artifacts, military aviation crash sites, Second World War pill boxes, air raid shelters, POW camps and other structures. There is also emphasis on Britain's ally in both world wars, the United States of America, examining the artifacts, wreckology structures and dumping grounds left behind by the American military forces at the end of the Second World War both in the UK and Europe. Military Archaeology: How Detectorists and Major Finds Improve our Understanding of History is a valuable addition to the military and literary analysis of the archaeology of warfare from the Boudiccan uprising to the 2003 Invasion of Iraq. Eco-Sonic Media Jacob Smith, 2015-06-05. The negative environmental effects of media culture are not often acknowledged: the fuel required to keep huge server farms in operation, landfills full of high tech junk and the extraction of rare minerals for devices reliant on them are just some of the hidden costs of the contemporary mediascape. Eco-Sonic Media brings an ecological critique to the history of sound media technologies in order to amplify the environmental undertones in sound studies and turn up the audio in discussions of greening the media. By looking at early and neglected forms of sound technology, Jacob Smith seeks to create a revisionist, ecologically aware history of sound media. Delving into the history of pre-electronic media like hand-cranked gramophones, comparatively eco-friendly media artifacts such as the shellac discs that preceded the use of petroleum-based vinyl, early forms of portable technology like divining rods and even the use of songbirds as domestic music machines, Smith builds a scaffolding of historical case studies to demonstrate how green media archaeology can make sound studies vibrate at an ecological frequency while opening the ears of eco-criticism. Throughout this eye-opening and timely book, he makes readers more aware of the costs and consequences of their personal media consumption by prompting comparisons with non-digital, non-electronic technologies and by offering different ways in which sound media can become eco-sonic media. In the process, he forges interdisciplinary connections, opens new avenues of research and poses fresh theoretical questions for scholars and students of media, sound studies and contemporary environmental history.
