Hello,

I am interested to know more about cyber security and application development, after I have done so researching, I found out that C language is one of the languages that can provide some low-level functionality to users. "Low-level" functionality just means that a programmer can operate at the bit-level, interact with a computer's memory and CPU registers directly, and perform other high-level tasks as well. C has a lot of flexibility and it depends on the situation you are using it for.

Post 2

Hello,

C language is essential in cyber security perspective, an attacker who is proficient in C could manipulate all kinds of vulnerabilities in a computer's system – which makes it equally important for cyber professionals to be able to identify these weaknesses themselves and know how to counter them. And since C is the basis for so many operating systems, there are a substantial number of attacks that are going after targets that are written in C., I think it is one of the top languages that I would like to learn.
