The 2012 GCSE English results prompted significant controversy which ultimately resulted in an application for judicial review. This report sets out the background to these events and identifies lessons to be learned. The problems with GCSE English can be traced back to the 2007/09 development phase of the qualification in particular the turbulence which resulted from the shift away from a mostly linear to a modular system combined with a high proportion of controlled assessment and generous marking tolerances. Exam board experts raised concerns at the time but these were not acted upon by the regulator the then interim Ofqual. Further difficulties arose because of pressures from the school accountability system. The problems experienced with GCSE English in 2012 highlighted serious weaknesses in the moderation of speaking and listening with consequences for grade awarding. The current status of Ofqual as an independent regulator accountable to Parliament is the right one. However the Coalition Government is bringing in wholesale changes to GCSEs and A levels to a tight timetable and at the same time Ofqual must have systems in place. The Committee is also concerned that there is a rush towards separate exam systems for England Wales and Northern Ireland without careful reflection on what might be lost or consensus that this is the right thing to do. **Threshold Concepts in Practice** Ray Land, Jan H. F. Meyer, Michael T. Flanagan, 2016-07-09. Threshold Concepts in Practice brings together fifty researchers from sixteen countries and a wide variety of disciplines to analyse their teaching practice and the learning experiences of their students through the lens of the Threshold Concepts Framework. In any discipline there are certain concepts the jewels in the curriculum whose acquisition is akin to passing through a portal. Learners enter new conceptual and often affective territory. Previously inaccessible ways of thinking or practising come into view without which they cannot progress and which offer a transformed internal view of subject landscape or even world view. These conceptual gateways are integrative exposing the previously hidden interrelatedness of ideas and are irreversible. However they frequently present troublesome knowledge and are often points at which students become stuck. Difficulty in understanding may leave the learner in a liminal state of transition a betwixt and between space of knowing and not knowing where understanding can approximate to a form of mimicry. Learners navigating such spaces report a sense of uncertainty ambiguity paradox anxiety even chaos. The liminal space may equally be one of awe and wonderment. Thresholds research

identifies these spaces as key transformational points crucial to the learner's development but where they can oscillate and remain for considerable periods. These spaces require not only conceptual but ontological and discursive shifts. This volume, the fourth in a tetralogy on Threshold Concepts, discusses student experiences and the curriculum interventions of their teachers in a range of disciplines and professional practices including medicine, law, engineering, architecture and military education. Teachers Matter – But How? Ninni Wahlström, Daniel Alvunger, Daniel Sundberg, 2019-12-18. Global processes are transforming educational policy around the world in complex ways with different implications for different local arenas. Over the last two decades a global neoliberal policy paradigm has emerged placing the teacher at its centre. Two well-known examples are the OECD report on education and training policy *Teachers Matter* and the McKinsey Company report entitled *How the World's Best Performing School Systems Come Out on Top*. It now seems more important than ever to highlight some alternatives that might contribute to a broader understanding of the meaning of being a teacher. In a time of standardised performance and accountability, this special issue raises critical questions about the space for teachers' agency and teachers as curriculum agents. The different articles from some of our most distinguished researchers in the field provide essential perspectives on the question of where, when and how teachers matter. Our interest is not primarily to understand the scope of teachers' agency but rather to understand what becomes important for teachers in their everyday activities such as teaching students, handling educational norms and rules, working in a local as well as a global society, etc. A common theme throughout the articles is that teachers matter in spaces where they can act as moral subjects in their profession, in the present, drawing on collective and individual experiences of the past whilst imagining a desired future. This book was originally published as a special issue of the *Journal of Curriculum Studies*.

Education Policy, Practice and the Professional Jane Bates, Sue Lewis, Andy Pickard, 2019-03-21. In this introduction to educational policy, practice and professionalism, the authors focus first on providing an historical overview of English policy from the state's first interventions in education through to Thatcherism and the election of the Blair government. Chapters then explore the key contemporary policies of recent times and offer a critique on how they have worked in practice with reference to the hysteria that often surrounds education policy. An important theme is media representation of educational matters and the effects this has on the teaching profession. Commentaries and case studies are presented throughout, providing an accessible link to what it was really like to learn, teach and live at the time the policy was in place. This new edition now includes an account of the measures taken by the Coalition Government of 2010-15, examining the Coalition's continuities with the previous administration whilst also exploring departures from previous thinking and practices, updated references and case studies throughout to represent new research and legislation since the first edition, an extended discussion of globalization and global policy, borrowing further coverage of social justice theory including a perspective on

identity theory and the role of education in the development of identity and the marginalisation of individuals and groups a new historical chapter covering the period 1945 to 1997 a summary of the development of the curriculum and a critique of the 2014 National curriculum as pioneered by Michael Gove and a new conclusion setting out the trajectory of current policies and how this may affect educational practitioners This is essential reading for all undergraduate students studying education policy and practice

Mathematics as the Science of Patterns Patrick M. Jenlink, 2022-02-01 Mathematics as the Science of Patterns Making the Invisible Visible to Students through Teaching introduces the reader to a collection of thoughtful research based works by authors that represent current thinking about mathematics mathematics education and the preparation of mathematics teachers Each chapter focuses on mathematics teaching and the preparation of teachers who will enter classrooms to instruct the next generation of students in mathematics The value of patterns to the teaching and learning of mathematics is well understood both in terms of research and application When we involve or appeal to pattern in teaching mathematics it is usually because we are trying to help students to extract greater meaning or enjoyment or both from the experience of learning environments within which they are occupied and perhaps also to facilitate remembering As a general skill it is thought that the ability to discern a pattern is a precursor to the ability to generalize and abstract a skill essential in the early years of learning and beyond Research indicates that the larger problem in teaching mathematics does not lie primarily with students rather it is with the teachers themselves In order to make changes for students there first needs to be a process of change for teachers Understanding the place of patterns in learning mathematics is a predicate to understanding how to teach mathematics and how to use pedagogical reasoning necessary in teaching mathematics Importantly the lack of distinction created by the pedagogical use of patterns is not immediately problematic to the student or the teacher The deep seated cognitive patterns that both teachers and students bring to the classroom require change Chapter 1 opens the book with a focus on mathematics as the science of patterns and the importance of patterns in mathematical problem solving providing the reader with an introduction The authors of Chapter 2 revisit the work of Polya and the development and implementation of problem solving in mathematics In Chapter 3 the authors present an argument for core pedagogical content knowledge in mathematics teacher preparation The authors of Chapter 4 focus on preservice teachers patterns of conception as related to understanding number and operation In Chapter 5 the authors examine the role of visual representation in exploring proportional reasoning denoting the importance of helping learners make their thinking visible The authors of Chapter 6 examine patterns and relationships and the importance of each in assisting students learning and development in mathematical understanding The authors of Chapter 7 examine the use of worked examples as a scalable practice with emphasis on the importance of worked examples in teaching fraction magnitude and computation is discussed In Chapter 8 the authors expand on the zone of proximal development to investigate the potential of Zankov's Lesson in terms of students analyzing numerical equalities The authors of Chapter 9 focus on high leverage mathematical practices in

elementary pre service teacher preparation drawing into specific relief the APEX cycle to develop deep thinking In Chapter 10 the author focuses on number talks and the engagement of students in mathematical reasoning which provides opportunities for students to be sensemakers of mathematics Chapter 11 presents an epilogue focusing on the importance of recognizing the special nature of mathematics knowledge for teaching Learning to Teach in the Secondary School Susan Capel, Marilyn Leask, Tony Turner, Sarah Younie, 2013-08-15 A sound and practical introduction to the skills needed to qualify as a teacher Learning to Teach in the Secondary School is designed to help develop the qualities that lead to good practice and a successful future in education
