## PSYCHOLOGY OF ADDICTION

In all the more prominent interdisciplinary contexts of the systematic struggle against addiction, psychology has recognized as a profession its space for action, both in the area of prevention and in the field of suppression of addiction and treatment of addicts. But it may have been less exploited as science, and more as an aiding activity. However, psychology is increasingly actively involved in solving socially relevant public health issues in areas that have recently been "reserved" for the medical profession until recently. Psychologists as members of multidisciplinary teams currently have insufficiently defined, but solidly affirmed and fully recognizable and recognized positions of health care professionals in the health care system, as well as the position of professional associates in the system of education, social care and other systems. The independent role of a psychologist has so far been linked solely to the clinical approach to addiction treatment and addictive behavior, while also limiting it to reactive action (when the problem arises) while proactive action remains inadequate and sporadic and hence inefficient. Preventive activities rely heavily on specific education, psychoeducation and supportive practices, so psychology "has become" the only profession that in the system of early identification of problems, prevention, early interventions and later treatment (addicts) can offer a complete set of scientific knowledge based interventions. This psychology as an expert gives a leading role in trying to make the problem of addiction as small as it is quite certain that in the near future this problem will not come to an end. Inadequate to psychology is that a relatively small number of psychologists deal with addiction psychology, and those who are too busy dealing with them are investigating the phenomenon, analyzing the opportunities and limitations of the profession and failing to publicize the texts about new knowledge and experience.
