The Archaeology of Human Bones Simon Mays, 2010-04-21 The Archaeology of Human Bones provides an up to date account of the scientific analysis of human skeletal remains from archaeological sites This completely revised edition reflects the latest developments in scientific techniques for studying human skeletons and the latest applications of those techniques in archaeology In particular the sections on ancient DNA and bone stable isotopes have been comprehensively updated and two completely new chapters have been introduced covering metric study of the postcranial skeleton and ethical dimensions of the study of human remains The Archaeology of Human Bones introduces students to the anatomy of bones and teeth utilising a large number of images It analyzes the biasing effects of decay and incomplete recovery on burial data from archaeological sites and discusses what we may learn about burial rites from human remains Subsequent chapters focus on demographic analysis of earlier populations normal skeletal variation disease and injury isotopic and DNA analysis of bone the study of cremated bone and ethical aspects of working with ancient human remains Current scientific methods are explained alongside a critical discussion of their strengths and weaknesses The ways in which scientific analyses of human skeletal remains can contribute to tackling major archaeological or historical issues is illustrated by means of examples drawn from studies from around the world Technical jargon is kept to a minimum and each chapter contains a summary of the main points that a student should grasp and a list of further reading targeted to enable students to follow up major issues covered in the book Featuring case studies from around the world and with copious illustrations The Archaeology of Human Bones continues to be a crucial work for students of archaeology *The Abu Bakr Cemetery at Giza* Edward Brovarski, Tohfa Handoussa, 2021-07-31 The present volume reflects the work of the joint expedition of Cairo University and Brown University to record and publish the tombs uncovered on behalf of Cairo University by Prof Abdel Moneim Abu Bakr from 1949 through 1953 but never published The loss of field records and lack of a map of the site meant that new salvage excavation had to be undertaken A total of six seasons from 2000-2006 resulted in the clearing remapping and recording of the monuments in the cemetery Abu Bakr Cemetery is of particular interest because the majority of mastaba tombs belong to relatively low ranking

individuals Thus they have the potential to shed light on the social status of Egypt's working classes
