web about this chapter the flow of genetic information in cells from dna to mrna to protein is described by the central dogma which states that genes specify the sequence of mrnas which in turn specify the sequence of amino acids making up all proteins the decoding of one molecule to another is performed by specific proteins and rnas

web step 1 transcription here the dna sequence of a gene is rewritten in the form of rna in eukaryotes like you and me the rna is processed and often has a few bits snipped out of it to make the final product called a messenger rna or mrna step 2 translation

web aug 31 2020 transcription and translation are the two processes that convert a sequence of nucleotides from dna into a sequence of amino acids to build the desired protein these two processes are essential for life they are found in all organisms eukaryotic and prokaryotic
