

FOURTH EDITION

A glass globe, resembling a lens or a small planet, is the central focus. It is resting on a bed of vibrant green moss. The globe's surface is highly reflective, mirroring the surrounding forest environment. The reflection shows a dense forest with tall, thin trees and a thick canopy of green leaves. The light filtering through the trees creates a dappled pattern of light and shadow on the globe's surface. The overall composition is serene and emphasizes the connection between the physical world and the geographical concepts being taught.

Contaminated Soil'93 F. Arendt,G.J. Annokkée,R. Bosman,W.J. van den Brink,2012-12-06 F Arendt XxX Conference chairman w Harder TNO Conference co chairman The 1993 Berlin conference on contaminated sites is the fourth in a series of meetings initiated by the Netherlands Organization of Applied Scientific Research TNO in 1985 and later continued with the Karlsruhe Nuclear Research center KfK of Germany The present economic stagnation or recession in many countries is leading to various proposals to reduce the level of costly environmental activities restricted funds are used for really urgent cases rather than precautionary measures The level of soil contamination caused by the former centrally planned economies adds to this tendency The Conference tries to broach this controversy by discussing once more the

targets and strategies of soil remediation with follow up use of the site as an important parameter Both new regulations and modifications of existing lists for a tolerable level of contamination are reviewed alike Immobilization and enclosure of pollutants are often less expensive than complete remediation and consequently may grow in significance We consider the conference of great significance for demonstrating the experiences gained with management and remediation of contaminated sites internationally among others to avoid mistakes and excessive costs Two new types of soil contamination became apparent after the end of the cold war Many military sites airfields and training grounds are being abandoned After decades of use large sections and hot spots of these sites are polluted to a high average level
