Introductory Differential Equations Martha L. Abell, James P. Braselton, 2010-04-20 This text is for courses that are typically called Introductory Differential Equations Introductory Partial Differential Equations Applied Mathematics and Fourier Series Differential Equations is a text that follows a traditional approach and is appropriate for a first course in ordinary differential equations including Laplace transforms and a second course in Fourier series and boundary value problems Some schools might prefer to move the Laplace transform material to the second course which is why we have placed the chapter on Laplace transforms in its location in the text Ancillaries like Differential Equations with Mathematica and or Differential Equations with Maple would be recommended and or required ancillaries Because many students need a lot of pencil and paper practice to master the essential concepts the exercise sets are particularly comprehensive with a wide range of exercises ranging from straightforward to challenging Many different majors will require differential equations and applied mathematics so there should be a lot of interest in an intro level text like this The accessible writing style will be good for non math students as well as for undergrad classes      Student Solutions Manual, Partial Differential Equations & Boundary Value Problems with Maple George A. **Differential Equations with Maple V®** Martha L. Abell, James P. Braselton, 2014-05-09 Differential Equations with  
Maple V provides an introduction and discussion of topics typically covered in an undergraduate course in ordinary  
differential equations as well as some supplementary topics such as Laplace transforms Fourier series and partial differential  
equations It also illustrates how Maple V is used to enhance the study of differential equations not only by eliminating the  
computational difficulties but also by overcoming the visual limitations associated with the solutions of differential equations  
The book contains chapters that present differential equations and illustrate how Maple V can be used to solve some typical  
problems The text covers topics on differential equations such as first order ordinary differential equations higher order  
differential equations power series solutions of ordinary differential equations the Laplace Transform systems of ordinary  
differential equations and Fourier Series and applications to partial differential equations Applications of these topics are  
also provided Engineers computer scientists physical scientists mathematicians business professionals and students will find
