Rescuing Econometrics Duo Qin, 2023-12-01 Haavelmo's 1944 monograph *The Probability Approach in Econometrics* is widely acclaimed as the manifesto of econometrics This book challenges Haavelmo's probability approach shows how its use is delivering defective and inefficient results and argues for a paradigm shift in econometrics towards a full embrace of machine learning with its attendant benefits Machine learning has only come into existence over recent decades whereas the universally accepted and current form of econometrics has developed over the past century A comparison between the two is however striking The practical achievements of machine learning significantly outshine those of econometrics confirming the presence of widespread inefficiencies in current econometric research The relative efficiency of machine learning is based on its theoretical foundation and particularly on the notion of Probably Approximately Correct PAC learning Careful examination reveals that PAC learning theory delivers the goals of applied economic modelling research far better than Haavelmo's

probability approach Econometrics should therefore renounce its outdated foundation and rebuild itself upon PAC learning theory so as to unleash its pent up research potential The book is catered for applied economists econometricians economists specialising in the history and methodology of economics advanced students philosophers of social sciences

with the inherent risk of pathogen transmission The nature of this interface is complex and can significantly vary over time and across landscapes throughout the world Over the last centuries processes such as human intervention on agriculture and animal husbandry industrialization or globalization have altered ecosystems These changes often lead to more interconnected interfaces and increased opportunities for the emergence and spread of pathogens because the human population is increasing and expanding livestock production is therefore increasing to supply the growing food demand and wildlife often under the pressure of habitat reduction is becoming more exposed to these new interfaces
