Graded Logic Jozo Dujmović, 2025-09-19 Observable human commonsense reasoning can be modeled with graded propositional logic Our approach is distinctive in that all mathematical models are directly linked to specific observable and explainable mental activities Decision makers evaluate alternatives through perceived gradations of truth importance suitability simultaneity and substitutability Each graded variable has a semantic identity reflecting its role and meaning tied to the goals and interests of a specific decision maker Graded logic was introduced 50 years ago and this book presents its current status based on a half century of improvements and applications The book includes examples of decision problems solved using graded logic models Our aim is to provide readers with a solid theoretical foundation in graded propositional calculus enabling them to confidently apply the LSP method on complex evaluation and decision problems Additionally the book suggests numerous directions for future research and applications
