Nonlinear Optimization William P. Fox, 2020-12-08 Optimization is the act of obtaining the best result under

given circumstances In design construction and maintenance of any engineering system engineers must make technological and managerial decisions to minimize either the effort or cost required or to maximize benefits There is no single method available for solving all optimization problems efficiently Several optimization methods have been developed for different types of problems The optimum seeking methods are mathematical programming techniques specifically nonlinear programming techniques Nonlinear Optimization Models and Applications presents the concepts in several ways to foster understanding Geometric interpretation is used to re enforce the concepts and to foster understanding of the mathematical procedures The student sees that many problems can be analyzed and approximate solutions found before analytical solutions techniques are applied Numerical approximations early on the student is exposed to numerical techniques These numerical procedures are algorithmic and iterative Worksheets are provided in Excel MATLAB and MapleTM to facilitate the procedure Algorithms all algorithms are provided with a step by step format Examples follow the summary to illustrate its use and application Nonlinear Optimization Models and Applications Emphasizes process and interpretation throughout Presents a general classification of optimization problems Addresses situations that lead to models illustrating many types of optimization problems Emphasizes model formulations Addresses a special class of problems that can be solved using only elementary calculus Emphasizes model solution and model sensitivity analysis About the author William P Fox is an emeritus professor in the Department of Defense Analysis at the Naval Postgraduate School He received his Ph D at Clemson University and has taught at the United States Military Academy and at Francis Marion University where he was the chair of mathematics He has written many publications including over 20 books and over 150 journal articles Currently he is an adjunct professor in the Department of Mathematics at the College of William and Mary He is the emeritus director of both the High School Mathematical Contest in Modeling and the Mathematical Contest in Modeling
