Science Teaching in Schools Great Britain: Parliament: House of Lords: Science and Technology Committee, 2006-11-05 The Committee s report examines science and mathematics teaching in secondary schools in England focusing on the following issues the take up of science and mathematics at GCSE and A level the provision of careers advice to students problems in the recruitment and retention of teachers the quality of teaching methods and the role of continuing professional development The Committee finds that effective science teaching in schools is essential both in order to ensure a satisfactory general level of scientific literacy in society and to enable the next generation of scientists and engineers to progress into higher education and beyond It argues that the current examination system forces students to study an excessively narrow range of subjects at too early an age and it recommends that the Government should reconsider the Tomlinson proposals for a broader diploma based system for 14 19 year old students based on the International Baccalaureate This would ensure that students receive a more rounded education and are not made to over specialise before they are able to see the merits of studying science and mathematics Concerns are also raised about the shortage of science teachers particularly specialist physics and chemistry teachers the quality of careers advice in schools and the importance of practical science in schools

Adrift Center for Public Integrity, 2007-06-01 Hurricane Katrina was a stunning example of complete civic breakdown

Beginning on August 29 2005 the world watched in horror as despite all the warnings and studies every system that might have protected New Orleans failed Levees and canals buckled pouring more than 100 billion gallons of floodwater into the city Botched communications crippled rescue operations Buses that might have evacuated thousands never came Hospitals lost power and patients lay suffering in darkness and stifling heat At least 1 400 Louisianans died in Hurricane Katrina more than half of them from New Orleans and hundreds of thousands more were displaced many still wondering if they will ever be able to return How could all of this have happened in twenty first century America And could it all happen again To answer these questions the Center for Public Integrity commissioned seven seasoned journalists to travel to New Orleans and investigate the storm s aftermath In *City Adrift New Orleans Before and After Katrina* they present their findings The stellar roster of contributors includes Pulitzer Prize winner John McQuaid whose earlier work predicted the failure of the levees and the impending disaster longtime Boston Globe newsman Curtis Wilkie a French Quarter resident for nearly fifteen years and Katy Reckdahl an award winning freelance journalist who gave birth to her son in a New Orleans hospital the day before Katrina hit They and the rest of the investigative team interviewed homeowners and health officials first responders and politicians and evacuees and other ordinary citizens to explore the storm from numerous angles including health care social services housing and insurance and emergency preparedness They also identify the political social geographical and technological factors that compounded the tragedy Comprehensive and balanced *City Adrift* provides not only an assessment of what went wrong in the Big Easy during and following Hurricane Katrina but also more importantly a road map of what must be done to ensure that such a devastating tragedy is never repeated
