New Approaches to Characterization and Recognition of Faces Peter Corcoran, 2011-08-01 As a baby one of our earliest stimuli is that of human faces We rapidly learn to identify characterize and eventually distinguish those who are near and dear to us We accept face recognition later as an everyday ability We realize the complexity of the underlying problem only when we attempt to duplicate this skill in a computer vision system This book is arranged around a number of clustered themes covering different aspects of face recognition The first section presents an architecture for face recognition based on Hidden Markov Models it is followed by an article on coding methods The next section is devoted to 3D methods of face recognition and is followed by a section covering various aspects and techniques in video Next short section is devoted to the characterization and detection of features in faces Finally you can find an article on the human perception of faces and how different neurological or psychological disorders can affect this
