SOFTWARE QUALITY ASSURANCE: TRANSFORMING TESTING WITH AI AND MACHINE LEARNING Amit Bhanushali,2023-10-30 New challenges have arisen for the construction of contemporary AI based systems as a result of recent developments in artificial intelligence AI in particular machine learning ML and deep learning DL and their incorporation into software based systems utilized in all sectors of the economy These systems place a heavy reliance on data are constantly evolving and bettering themselves and display a degree of intrinsic nondeterminism As a consequence their behavior displays a degree of uncertainty that is universally acknowledged As a result of these characteristics the field of software engineering has to devise adaptable and innovative approaches to quality assurance QA that are capable of both constructive and in depth analysis This is essential in order to guarantee the product s high quality throughout the whole development process as well as while it is being put to use in actual settings On the other hand as Borg has pointed out the concept of quality in AI based systems does not yet have a definitive definition at this time As was noted before the terminology that is utilized in the field of artificial intelligence and software engineering is distinct from one another When developing AI based systems the knowledge and experiences of a wide variety of organizations are combined and utilized in the construction process While this does lead to new and creative ways exciting breakthroughs and a major advancement in what can be done with current AI based systems it also encourages the babel of language concepts perceptions and underlying assumptions and principles While this does lead to new and creative methods exciting breakthroughs and a substantial advancement in what can be done with current AI based systems this does lead to new and creative approaches While this does result in novel and creative methods exciting discoveries and a significant leap forward in terms of what can be accomplished with contemporary AI based systems it does so in spite of the fact that For instance in the field of machine

learning ML the term regression may be used to refer to regression models or regression analysis but in the field of software engineering SE the term regression is used to refer to regression testing However in the context of machine learning ML the term testing refers to the evaluation of performance characteristics such as accuracy of a trained model using a holdout validation dataset In the context of software engineering SE testing is described as the activity of executing the system in order to uncover errors As a consequence of this there is an increasing amount of confusion as well as the potential of solutions that are in contradiction with one another about how to approach quality assurance for AI based systems and how to deal with the challenges that are associated with it This is because of the fact that there are a growing number of solutions that are based on AI Although the authors of this study begin their investigation from the perspective of software engineering their ultimate goal is to include and talk about a wide variety of different points of view all of which will eventually come together to provide a multi dimensional picture of quality assurance for AI based systems While the authors of this study begin their investigation from the perspective of software engineering their ultimate goal is to include and talk about a wide variety of different points of view In the first part of this study project our primary focus is on defining the terminologies related with artificial intelligence quality assurance In the following section Section 3 we will discuss the challenges that are involved with QA for AI In the last part of the inquiry we will summarize what we found and form our conclusions **A**

scenarios which may allow certain levels of assistance and education in times of deep learning Mediated Learning and Cognitive Modifiability David Tzuriel, 2021-09-07 This book portrays an extensive and intensive discussion of theories and research that refer to Vygotsky's and Feuerstein's theories of mediated learning and their effects on learning potential and cognitive modifiability. Most topics are discussed in relation to a broad spectrum of developmental and cognitive research that are under the conceptual umbrella of mediated learning and cognitive modifiability. Some topics such as neural plasticity, executive functions, mental rotation and cognitive education are related to mediated learning though indirectly and therefore are included in this book. In many ways the book presents an extension of Vygotsky and Feuerstein's theories and empirical validation in a variety of family, social and cultural contexts. The book includes a thorough analysis and summary of 50 years of research and methodology of the intimate relation between mediated learning interactions and cognitive modifiability and of dynamic assessment underlying measurement of cognitive modifiability. Special emphasis is given to Tzuriel's dynamic assessment instruments developed during more than four decades. Tzuriel's novel instruments are interwoven in the extensive research on parent-child interactions, siblings, teachers and peers, mediation and in validation of dynamic assessment approach and cognitive education programs aimed at development of thinking skills and academic achievements.
