

# OPERATING SYSTEM

## Across

- [5] A situation during the execution of a process when more than one computer starts sharing a single resource and ultimately they both stop each other from accessing the resource
- [6] The smallest sequence of programmed instructions that can be managed independently by an operating system scheduler
- [7] the property of an operating system or programming environment to enable parallel (or pseudo-parallel) processing of several processes
- [8] a component that transparently stores data so that future requests for that data can be served faster
- [11] The ability of different parts or units of a program, algorithm, or problem to be executed out-of-order or in partial order, without affecting the outcome

## Down

- [1] A computer program that manages input/output requests from software and translates them into data processing instructions for the central processing unit and other electronic components of a computer
- [2] The initial set of operations that a computer performs after electrical power is switched on or when the computer is reset
- [3] Structural and functional organization of the OS based on some set of software modules
- [4] A contiguous area of a file's external memory, typically read or written by a single I/O operation
- [5] a computer program that runs as a background process, rather than being under the direct control of an interactive user
- [9] Hence ... manages all the connections of all the external devices in a system
- [10] a set of means and methods of interaction between the elements of the system
