Java 7 Recipes Josh Juneau, Mark Beaty, Carl Dea, Freddy Guime, John OConner, 2012-03-20. Java 7 Recipes offers solutions to common programming problems encountered every day while developing Java based applications. Fully updated with the newest features and techniques available, Java 7 Recipes provides code examples involving Servlets, Java FX 2.0, XML, Java Swing, and much more. You are free to crib from the book and apply the code examples directly to your own projects. Covers all new release of Java. Java 7 Focuses especially on up and coming technologies such as Java FX 2.0. Respects your time by focusing on practical solutions you can implement in your own code.

Programming for Everyone in Java Per B. Hansen, 2012-12-06. This is a book about computer programming for everyone: artist, poet, student, doctor, accountant, or engineer. It assumes you know very little or nothing about how computers work. This book will show you how to write understandable computer programs in Java, a programming language widely used on the Internet. Why should we be interested in learning computer programming? Even though most readers will not wish to become professional programmers, programming is fun and useful. You will enjoy learning a new skill and becoming good at it. And in today's world, it is important for professionals in any field to appreciate what computers can and cannot do well. To reach this level of understanding, you must go beyond the routine skills of a computer user and learn the art of programming in some depth. While emphasizing general principles of programming, this book uses examples from the humanities only, requiring no math or engineering knowledge. Explains all programming concepts by means of complete programs. Concentrates on exercises solved by writing complete programs. Takes the reader from text input/output to object-oriented programming in the equivalent of a one semester class. Gives the reader a solid background for follow-on courses on the graphics and networking facilities of Java. This book is a sound and complete introduction to programming and not just another Java reference book for those who already know how to program. Although the book uses Java, the same methods can be used for systematic programming in other languages such as C, Fortran, and Pascal. The book makes a splendid text for a one semester course on beginning programming, and for such a course, there are teaching aids available at the author's website. Professor Per Brinch

Hansen is one of the leading pioneers in computer programming and his insight and experience make learning proper computer programming in Java fun and easy for everyone

Undocumented Secrets of MATLAB-Java Programming Yair M. Altman, 2011-12-05 For a variety of reasons the MATLAB Java interface was never fully documented This is really quite unfortunate Java is one of the most widely used programming

languages having many times the number of programmers and programming resources as MATLAB. Also unfortunate is the popular claim that while MATLAB is a fine programming platform for prototyping it is not suitable for real world modern looking applications. Undocumented Secrets of MATLAB Java Programming aims to correct this misconception. This book shows how using Java can significantly improve MATLAB program appearance and functionality and that this can be done easily and even without any prior Java knowledge. Readers are led step by step from simple to complex customizations. Code snippets, screenshots and numerous online references are provided to enable the utilization of this book as both a sequential tutorial and as a random access reference suited for immediate use. Java savvy readers will find it easy to tailor code samples for their particular needs. For Java newcomers an introduction to Java and numerous online references are provided. This book demonstrates how the MATLAB programming environment relies on Java for numerous tasks including networking, data processing, algorithms and graphical user interface GUI. We can use MATLAB for easy access to external Java functionality either third party or user created. Using Java we can extensively customize the MATLAB environment and application GUI enabling the creation of visually appealing and usable applications.

Pro Hadoop Jason Venner, 2009-08-09 You've heard the hype about Hadoop: it runs petabyte scale data mining tasks insanely fast, it runs gigantic tasks on clouds for absurdly cheap, it's been heavily committed to by tech giants like IBM, Yahoo and the Apache Project and it's completely open source, thus free. But what exactly is it and more importantly how do you even get a Hadoop cluster up and running? From Apress the name you've come to trust for hands on technical knowledge Pro Hadoop brings you up to speed on Hadoop. You learn the ins and outs of MapReduce, how to structure a cluster design and implement the Hadoop file system and how to build your first cloud computing tasks using Hadoop. Learn how to let Hadoop take care of distributing and parallelizing your software, you just focus on the code. Hadoop takes care of the rest. Best of all you'll learn from a tech professional who's been in the Hadoop scene since day one. Written from the perspective of a principal engineer with down in the trenches knowledge of what to do wrong with Hadoop, you learn how to avoid the common expensive first errors that everyone makes with creating their own Hadoop system or inheriting someone else's. Skip the novice stage and the expensive hard to fix mistakes, go straight to seasoned pro on the hottest cloud computing framework with Pro Hadoop. Your productivity will blow your managers away.
