Psychology and Mathematics Education Gila Hanna, Laura Macchi, Karin Binder, Laura Martignon, Katharina Loibl, 2023-09-05 Modern Mathematics is constructed rigorously through proofs based on truths which are either axioms or previously proven theorems Thus it is par excellence a model of rational inquiry Links between Cognitive Psychology and Mathematics Education have been particularly strong during the last decades Indeed the Enlightenment view of the rational human mind that reasons makes decisions and solves problems based on logic and probabilities was shaken during the second half of the twentieth century Cognitive psychologists discovered that humans thoughts and actions often deviate from rules imposed by strict normative theories of inference Yet these deviations should not be called errors as Cognitive Psychologists have demonstrated these deviations may be either valid heuristics that succeed in the environments in which humans have evolved or biases that are caused by a lack of adaptation to abstract information formats Humans as the cognitive psychologist and economist Herbert Simon claimed do not usually optimize but rather satisfice even when solving problem This Research Topic aims at demonstrating that these insights have had a decisive impact on Mathematics Education We want to stress that we are concerned with the view of bounded rationality that is different from the one espoused by the heuristics and biases program In Simon's bounded rationality and its direct descendant ecological rationality rationality is understood in terms of cognitive success in the world correspondence rather than in terms of conformity to

Local Language Testing Xun Yan, Slobodanka Dimova, April Ginther, 2023-07-18 This book describes language testing practices that exist in the intermediate space between large scale standardized testing and classroom assessment an area that is rarely addressed in language testing literature Drawing empirical research on a variety of languages the volume discusses local language tests ability to represent local contexts and values explicitly and purposefully embed test results within instructional practice and provide data for program evaluation

and research Although local testing practices have been grounded in the theoretical principles of language testing the authors in this volume supplement the theoretical content with practical examples of how local tests can be designed to effectively function within and across different institutional contexts Test Equating, Scaling, and Linking Michael J. Kolen, Robert L. Brennan, 2013-03-14 Test equating methods are used with many standardized tests in education and psychology to ensure that scores from multiple test forms can be used interchangeably In recent years researchers from the education psychology and statistics communities have contributed to the rapidly growing statistical and psychometric methodologies used in test equating This book provides an introduction to test equating which both discusses the most frequently used equating methodologies and covers many of the practical issues involved This second edition expands upon the coverage of the first edition by providing a new chapter on test scaling and a second on test linking Test scaling is the process of developing score scales that are used when scores on standardized tests are reported In test linking scores from two or more tests are related to one another Linking has received much recent attention due largely to investigations of linking similarly named tests from different test publishers or tests constructed for different purposes The expanded coverage in the second edition also includes methodology for using polytomous item response theory in equating The themes of the second edition include the purposes of equating scaling and linking and their practical context data collection designs statistical methodology designing reasonable and useful equating scaling and linking studies importance of test development and quality control processes to equating equating error and the underlying statistical assumptions for equating Given the perennial debates about academic standards and grade inflation it is my view that tools such as those described in this book should be adopted much more widely by the academic community than they are at present This book provides an excellent overview and I strongly recommend it Short Book Reviews of the ISI April 2005 I highly recommend this book to everybody who has any interest in equating and linking be they a student practitioner or researcher Psychometrika 2006 Handbook of Item Response Theory Wim J. van der Linden, 2017-12-15 Drawing on the work of internationally acclaimed experts in the field Handbook of Item Response Theory Volume 3 Applications presents applications of item response theory to practical testing problems While item response theory may be known primarily for its advances in theoretical modeling of responses to test items equal progress has been made in its providing innovative solutions to daily testing problems This third volume in a three volume set highlights the major applications Specifically this volume covers applications to test item calibration item analysis model fit checking test score interpretation optimal test design adaptive testing standard setting and forensic analyses of response data It describes advances in testing in areas such as large scale educational assessment psychological testing health measurement and measurement of change In addition it extensively reviews computer programs available to run any of the models and applications in Volume One and Three Features Includes contributions from internationally acclaimed experts with a history of advancing applications of item response theory Provides extensive cross referencing and

common notation across all chapters in this three volume set Underscores the importance of treating each application in a statistically rigorous way Reviews major computer programs for item response theory analyses and applications Wim J van der Linden is a distinguished scientist and director of research and innovation at Pacific Metrics Corporation Dr van der Linden is also a professor emeritus of measurement and data analysis at the University of Twente His research interests include test theory adaptive testing optimal test assembly parameter linking test equating and response time modeling as well as decision theory and its applications to problems of educational decision making
