Myopia Of Greed:

The Triumph of Economic Freedom Phil Gramm, Donald J. Boudreaux, 2025-05-13 This readable and important book makes a strong case that the received version of economic history taught in high schools and colleges across the country is off the mark and that its errors distort current policy debates. It deserves attention from economic policymakers of all persuasions. LAWRENCE SUMMERS former Secretary of the Treasury President Emeritus Harvard University Since the dawn of the Industrial Revolution capitalism has unleashed unimaginable growth in opportunity and prosperity. And yet at key points in American history economic disruption has led to a greater role for government ostensibly to protect against capitalism's excesses. Today government regulates, mandates, subsidizes and controls a growing share of the American economy. In this book Phil Gramm, one of America's premier public policy advocates and noted economist Donald J. Boudreaux look at the seven events and issues in American history that define for most Americans the role of government and how the 21st century world works. To many Americans these 5 periods of American history: the Industrial Revolution, Progressive Era, Great Depression, decline of America's postwar preeminence in world trade and the Great Recession along with the existing levels of income inequality and poverty represent strong evidence for expanding government in American life. Gramm and Boudreaux argue that the evidence points to a contrary verdict: government interference and failed policies pose the most significant threat to economic freedom. Setting up each topic with a just the facts approach that defies partisanship, Gramm and Boudreaux provide a compelling and highly readable, powerful reassessment that will challenge open-minded readers to rethink the conventional wisdom and the policies that spring from them.

Myopia of Greed Joseph Halsted, 2015-01-20 Historical novel based on facts about the migration of enslaved people in the American south to the new free colony of Freetown in Sierra Leone. Maame, a teenage girl, is awakened by a screaming hoard of savages. Dragged from her home, she is chained with her neighbors, the young and elderly ruthlessly murdered before her eyes. Forced to march to a slave pen, she awaits shipment in a stinking slave ship's hold to an auction across the sea. Caleb is nearly whipped to death for merely helping a sick woman. With two friends, he barely escapes through the Underground Railway, closely tracked by Tom Black, an implacable bounty hunter seeking reward for his return, dead or alive. The two meet in New England as Jake Shaw, a ship owner and his family, spirit them to safety in Nova Scotia and then on to Freetown in Sierra Leone, a free colony established by The Saints in London. The bounty hunter, visualizing huge profits from the value of so many escapees, is relentless. Enlisting slave ship captains and even the French Navy, he intends to sack the colony and resell its citizens back to slavery. **Myopia of Greed** is an uplifting tale inspired by historical facts including the final battle between the largely undefended Freetown citizenry and the French Navy.

Deadly Imbalances Randall L. Schweller, 1998 Scholars frequently portray the Second World War as an epic morality play driven by a villain Hitler and a sinner Chamberlain. **Deadly Imbalances** offers a new approach combining both the attributes of states and the structure of the international system to explain the origins and

causes of the war Central to Schweller's analysis is the argument that the structure of the international system was tripolar with Germany the Soviet Union and the United States as the three central powers and that this needs to be considered in any examination of the antecedent causes and crucial events of the war

Greedy Methods for Algorithm Design: Foundations, Analysis, and Practical Applications William E Clark, 2025-08-24 Greedy Methods for Algorithm Design Foundations Analysis and Practical Applications offers a rigorous comprehensive introduction to one of the most influential paradigms in algorithm design Beginning with precise definitions and core principles such as the greedy choice property and optimal substructure the book explains when and why greedy approaches succeed or fail It systematically contrasts greedy methods with related paradigms like dynamic programming presents essential proof techniques and canonical counterexamples and is written to be accessible to advanced students practitioners and researchers alike The text develops the mathematical foundations needed to analyze greedy algorithms including matroid theory greedoids exchange arguments and linear programming duality and uses these tools to derive correctness proofs and approximation guarantees These principles are applied across a broad range of canonical problems minimum spanning trees shortest paths data compression and resource allocation and extended to advanced strategies such as randomized adaptive and online greedy schemes Special attention is given to the unique challenges that arise in graph algorithms combinatorial optimization and machine learning illustrating both the versatility and the limits of greedy design Beyond theory the book addresses practical concerns of efficient implementation from choice of data structures and profiling techniques to parallel distributed and cloud and edge computing deployments Closing chapters survey emerging applications in fields such as bioinformatics and blockchain explore hybrid metaheuristics and open theoretical problems and consider the broader ethical and societal implications of deploying greedy methods Altogether this volume serves as an authoritative reference for mastering greedy methods in both foundational analysis and real world practice

Africa Reunite or Perish Nkuzi Mhango, 2015-12-01 Africa Reunite or Perish is a daring and timely book that explores the essence and nefariousness of neocolonialism in a purportedly independent Africa The book shows how Africa spends billions of dollars in pseudo threats

among African countries due to colonially entrenched fear and war mongering The book is emphatic on deconstruction and decolonisation as a categorical imperative for the reunification of Africa beyond the narrow confines of current nation states Mhango takes a diagnostic cum prognostic approach in discussing Africas predicaments and in identifying and proposing solutions to problems confronting Africans The book ascertains Africas untapped potentials by proving how Africa can live without the infamy of excruciating dependency and beggarliness It makes a compelling case for African unity beyond the tokenism of officialdom It prescribes a truly pan African driven reunification of Africa as the only means of reclaiming the glory she used to enjoy before she was savagely partitioned **Foundations of Intelligent Systems** Zbigniew W.

Automating the Design of Data Mining Algorithms Gisele L. Pappa, Alex Freitas, 2009-10-27 Data mining is a very active research area with many successful real world applications It consists of a set of concepts and methods used to extract interesting or useful knowledge or patterns from real world datasets providing valuable support for decision making in industry business government and science Although there are already many types of data mining algorithms available in the literature it is still difficult for users to choose the best possible data mining algorithm for their particular data mining problem In addition data mining algorithms have been manually designed therefore they incorporate human biases and preferences This book proposes a new approach to the design of data mining algorithms instead of relying on the slow and ad hoc process of manual algorithm design this book proposes systematically automating the design of data mining algorithms with an evolutionary computation approach More precisely we propose a genetic programming system a type of evolutionary computation method that evolves computer programs to automate the design of rule induction algorithms a type of classification method that discovers a set of classification rules from data We focus on genetic programming in this book because it is the paradigmatic type of machine learning method for automating the generation of programs and because it has the advantage of performing a global search in the space of candidate solutions data mining algorithms in our case but in principle other types of search methods for this task could be investigated in the future **Getting There** Stephen B. Goddard, 1996-11-15

From the glory days of the railroad to today's gridlocked six lane highway Getting There dramatizes America's shift from rail to road transportation how it has robbed Americans of the choice of travel options enjoyed by Europeans and why it threatens the nation's economic future Stephen B Goddard reveals how government joined automakers and roadbuilders to nearly destroy the rails and why the 21st century will witness high tech remedies and a railroad resurgence AmCham
