Bayesian Inference and Maximum Entropy Methods in Science and Engineering Adriano Polpo, Julio Stern, Francisco Louzada, Rafael Izbicki, Hellinton Takada, 2018-07-12 These proceedings from the 37th International Workshop on Bayesian Inference and Maximum Entropy Methods in Science and Engineering MaxEnt 2017 held in S o Carlos Brazil aim to expand the available research on Bayesian methods and promote their application in the scientific community They gather research from scholars in many different fields who use inductive statistics methods and focus on the foundations of the Bayesian paradigm their comparison to objectivistic or frequentist statistics counterparts and their appropriate applications Interest in the foundations of inductive statistics has been growing with the increasing availability of Bayesian methodological alternatives and scientists now face much more difficult choices in finding the optimal methods to apply to their problems By carefully examining and discussing the relevant foundations the scientific community can avoid applying Bayesian methods on a merely ad hoc basis For over 35 years the MaxEnt workshops have explored the use of Bayesian and Maximum Entropy methods in scientific and engineering application contexts The workshops welcome contributions on all aspects of probabilistic inference including novel techniques and applications and work that sheds new light on the foundations of inference Areas of application in these workshops include astronomy and astrophysics chemistry communications theory cosmology climate studies earth science fluid mechanics genetics geophysics machine learning materials science medical imaging nanoscience source separation thermodynamics equilibrium and non equilibrium particle physics plasma physics quantum mechanics robotics and the social sciences Bayesian computational techniques such as Markov chain Monte Carlo sampling are also regular topics as are approximate inferential methods

Foundational issues involving probability theory and information theory as well as novel applications of inference to illuminate the foundations of physical theories are also of keen interest

High-Dimensional Partial Differential Equations in Science and Engineering André D. Bandrauk, Michel C. Delfour, Claude Le Bris, 2007 High dimensional spatio temporal partial differential equations are a major challenge to scientific computing of the future Up to now deemed prohibitive they have recently become manageable by combining recent developments in numerical techniques appropriate computer implementations and the use of computers with parallel and even massively parallel architectures This opens new perspectives in many fields of applications Kinetic plasma physics equations the many body Schrodinger equation Dirac and Maxwell equations for molecular electronic structures and nuclear dynamic computations options pricing equations in mathematical finance as well as Fokker Planck and fluid dynamics equations for complex fluids are examples of equations that can now be handled The objective of this volume is to bring together contributions by experts of international stature in that broad spectrum of areas to confront their approaches and possibly bring out common problem formulations and research directions in the numerical solutions of high dimensional partial differential equations in various fields of science and engineering with special emphasis on chemistry and physics Information for our distributors Titles in this series are co published with the Centre de Recherches Mathematiques
