

## ELECTROMECHANICAL ENERGY CONVERSION

### INTRODUCTION

Although the lines of magnetic flux have no physical existence, they do form a very convenient and useful basis for explaining various magnetic effects and to calculate the magnitudes of various magnetic quantities. The complete closed path followed by any group of magnetic flux lines is referred as magnetic circuit. The lines of magnetic flux never intersect, and each line forms a closed path. Whenever a current is flowing through the coil there will be magnetic flux produced and the path followed by the magnetic flux is known as magnetic circuit. The operation of all the electrical devices like generators, motors, transformers etc. depend upon the magnetism produced by this magnetic circuit. Therefore, to obtain the required characteristics of these devices, their magnetic circuits have to be designed carefully.

### I – FUNDAMENTALS OF MAGNETIC CIRCUITS

#### Magneto Motive Force (MMF)

The magnetic pressure which sets up or tends to set up magnetic flux in a magnetic circuit is known as MMF.

1. Magneto motive force is the measure of the ability of a coil to produce flux.
2. The magnetic flux is due to the existence of the MMF caused by a current flowing through a coil having no. of turns.
3. ∴ A coil with 'N' turns carrying a current of 'I' amperes represents a magnetic circuit producing an MMF of NI      MMF=NI
4. Units of MMF = Ampere turns(AT)

#### Magnetic Flux:

1. The amount of magnetic lines of force set-up in a magnetic circuit is called magnetic flux.
2. The magnetic flux, that is established in a magnetic circuit is proportional to the MMF and the proportional constant is the reluctance of the magnetic circuit.

Magnetic flux  $\propto$  MMF

$$\text{Magnetic flux} = \frac{\text{MMF}}{\text{RELUCTANCE}} = \frac{NI}{S}$$

3. The unit of magnetic flux is Weber.

#### Reluctance:

1. The opposition offered to the flow of magnetic flux in a magnetic circuit is called reluctance
2. Reluctance of a magnetic circuit is defined as the ratio of magneto motive force to the flux established.

David J. A. Evans, Douglas I. Benn, 2014-04-23 Sediments are the most valuable form of physical evidence for past Earth surface processes They have the potential to build up an archive of events and provide a window into the past Through careful examination of sediments the shifting patterns of surface processes across space and time are revealed allowing us to reconstruct past environments and environmental change A Practical Guide to the Study of Glacial Sediments is a guide to

the standard techniques employed to read the sedimentary record of former glaciers and ice sheets It demonstrates that the often complex and fragmentary glacial sedimentary record can when examined systematically and rationally provide detailed insights into former environments and climates in places where no other evidence is available The complementary techniques covered in this book include facies description grain size analysis clast form assessment clast macrofabric analysis micromorphology particle lithology and assessment of engineering properties They yield consistent and meaningful results in a range of glacial depositional environments throughout the world from the high Arctic to the Himalayas A Practical Guide to the Study of Glacial Sediments provides students and researchers with a clear and accessible guide to recording and interpreting glacial successions wherever the location

**Love to Learn** Isabelle C. Hau, 2025-02-11 The most important aspect of early childhood in general and education in particular is the quality and care of the relationships a child forms Love to Learn shows how to build and develop these relationships and unlock every child's true potential Early relationships are the key to healthy brain development resilience and lifelong flourishing Children need to be loved to be valued to interact and to be listened to When children have the space and time to play and explore through nurturing positive relationships then children learn But loving relationships are precisely what so many children are missing and modern factors are making it more difficult for children to build these necessary bonds Kids are growing up in smaller families with fewer siblings and in more single parent households They have fewer adult family friends and mentors They have less contact with grand parents and grand adults They spend 60% less time with friends than children did a decade ago They play outside less half the time spent by their parent's generation They find themselves increasingly immersed in solitary realms of screens a modern sanctuary where parents seek refuge as well Many kids are so overscheduled they have less time to build friendships Love to Learn offers a vision for a future where learning is relational and love is a literacy It is a provocative paradigm shift from child centered education to relationship centered

learning It weaves in stories of perseverance empathy creativity and showcases innovations anchored in the latest neuroscience and technology advance all driven by the desire to unlock the inherent human potential in any child This hope filled book seeks to change how we raise our children how we run early learning environments and how we construct care full communities It aims to inspire and engage readers catalyze new solutions and in doing so change our understanding of childhood itself     Guide to Stability Design Criteria for Metal Structures Theodore V.
