Where In The World Are We?

Asking where we are may seem like a silly question. We live in Texas. Isn't that the answer? It is part of the answer, but there is more, and it is very interesting. Texas hasn't always looked like it does now. The land has changed. The kinds of plants and animals living in Texas have changed. Even the weather has changed. Many of these changes took place over millions of years. Texas has changed a lot since people first lived here 12,000 years ago. Let's take a look at some of the changes Texas has seen.

Did you know that some Texans live on land that was once the floor of an ancient sea? Thirty million years ago, the body of water we call the Gulf of Mexico covered most of the southern and southeastern parts of Texas. The rest of the state was dry most of the time. When it wasn't dry, shallow seas covered it.

Texans who live near Burnet or Llano live on land geologists believe is some of the oldest land on Earth. Geologists are people who study the Earth. They call this area the Llano Uplift. While the rest of Texas was still under water, the land around Burnet and Llano was pushed up out of an ancient ocean.

Some Texans live on land where dinosaurs once roamed. About 113 million years ago, dinosaurs lived in the area around Glen Rose. The land we now know as Texas was closer to the equator and was much warmer. The land looked more like a jungle than what we see today. Petrified palm wood found in

Texas is evidence of this. In fact, palm wood is the state stone.

In spite of what you may have seen in the movies, humans were not on Earth when the dinosaurs roamed Texas. Even though people were not around to see them, we know the dinosaurs were here by the fossils and footprints people have found. Some of the footprints are preserved in stone at Dinosaur Valley State Park near Glen Rose.

You might think we have to go back millions of years for Texas to look different from the way it looks today. Actually, you only have to go back about 12,000 years. That is when the Earth was near the end of the last great Ice Age. An Ice Age happens when the Earth's temperature cools for a long period of time.

Strange animals made Texas their home during the last Ice Age. Some were carnivores (meat-eating animals) and some were herbivores (plant-eating animals). The giant Columbian Mammoth looked like a huge elephant. Saber-tooth cats, camels and long-horned bison roamed the land. People did live in Texas during this time. They hunted some of these animals. At Lake Lubbock Landmark, you can see where these early Texans hunted, killed and butchered Columbian Mammoths.

You've learned that you live in a state that has seen many changes. Now that we know a little about Texas's past, let's take a closer look at the Texas you know today.
