Topics and Trends in Current Statistics Education Research Gail Burrill, Dani Ben-Zvi, 2018-12-29 This book focuses on international research in statistics education providing a solid understanding of the challenges in learning statistics. It presents the teaching and learning of statistics in various contexts including designed settings for young children, students in formal schooling, tertiary level students and teacher professional development. The book describes research on what to teach and platforms for delivering content, curriculum strategies on how to teach for deep understanding and includes several chapters on developing conceptual understanding, pedagogy and technology, teacher knowledge and beliefs and the challenges teachers and students face when they solve statistical problems, reasoning and thinking. This new research in the field offers critical insights for college instructors, classroom teachers, curriculum designers, researchers in mathematics and statistics education as well as policy makers and newcomers to the field of statistics education. Statistics has become one of the key areas of study in the modern world of information and big data. The dramatic increase in demand for learning statistics in all disciplines is accompanied by tremendous growth in research in statistics education. Increasingly, countries are teaching more quantitative reasoning and statistics at lower and lower grade levels within mathematics, science and across many content areas. Research has revealed the many challenges in helping learners develop statistical literacy, reasoning and thinking and new curricula and technology tools show promise in facilitating the achievement of these desired outcomes.

Interface between Literature and Science Victoria Carpenter, 2015-05-13 The boundaries of science and literature are permeable they are continuously crossed and illuminated by a variety of narrative forms and their interpretations Changes in our perception of the world are informed in equal measure by scientific and humanistic disciplines This volume treats both literary and scientific texts as products of the human mind therefore abiding by all the rules it creates scientific and humanistic alike The volume does not propose to replace all literary or discourse analysis with a cross disciplinary science based approach but rather uses this theoretical stance when more conventional means fail to explain or even explore the intricacies of a text It argues that scientific discourse can also be analysed through the prism of literary theories since all texts are governed in varying measure by the unity of contexts that characterize their nature the process of their creation and their place in the cognitive realm of humanity This approach will allow the nature and limitations of scientific research to be questioned while opening up more venues to explore scientific creativity that crosses the subject boundaries of science and humanities Latin American literature offers many examples of the interconnection between literary and scientific discourse Notwithstanding the often explored relationship between Jorge Luis Borges's literary themes and contemporary scientific discoveries a more general question should be asked is the influence of scientific thought a privilege of the select few or is it indeed an all pervading experience in Latin American literary narrative from late modernism to present day This book explores the texts that overtly incorporate scientific content or are structured in such a way that immediately reminds the reader of a scientific phenomenon it will also examine the texts that are presented in such a way that a conventional literary analysis does not help penetrate the many narrative layers that the text comprises The volume
