

2. GASEOUS EXCHANGE

- This is the process by which respiratory gases (carbon (IV) oxide and oxygen) are passed across the respiratory surface.
- This is brought about by the concentration gradient between the body of living organisms and the surrounding medium.
- In simple organisms gaseous exchange takes place through simple diffusion **because they have larger surface area to volume ratio** while complex organisms have special organs for gaseous exchange.

Importance/significance of gaseous exchange.

- i. It enables cells to obtain oxygen for respirations and facilitate removal of carbon (IV) oxide as a metabolic waste.
- ii. It enables the green plants to obtain carbon (IV) oxide necessary for photosynthesis.
