Jonathan A. Plucker, Scott J. Peters, 2020-01-15 2017 Texas Association for Gifted and Talented Legacy Scholar Book Award 2017 National Association of Gifted Children Scholar Book of the Year Award In *Excellence Gaps in Education*, Jonathan A. Plucker and Scott J. Peters shine a spotlight on excellence gaps, the achievement gaps among subgroups of students performing at the highest levels of achievement. Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial, ethnic, or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency. Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities. Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American, Hispanic, Native American, and poor students, resulting in an incalculable loss of potential among our fastest growing populations. Drawing on the latest research and a wide range of national and international data, the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination. They identify promising interventions for talent development already underway in schools and provide a detailed review of potential strategies, including universal screening, flexible grouping, targeted programs, and psychosocial interventions. *Excellence Gaps in Education* has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high-potential students from underrepresented backgrounds.

**Demystifying AI for the Enterprise** Prashant Natarajan, Bob Rogers, Edward Dixon, Jonas Christensen, Kirk Borne, Leland Wilkinson, Shantha Mohan, 2021-12-30 Artificial intelligence (AI) in its various forms—machine learning, chatbots, robots, agents, etc.—is increasingly being seen as a core component of enterprise business workflow and information management systems. The current promise and hype around AI are being driven by software vendors, academic research projects, and startups. However, we posit that the greatest promise and potential for AI lies in the enterprise, with its applications touching all organizational facets. With increasing business process and workflow maturity, coupled with recent trends in cloud computing, datafication, IoT, cybersecurity, and advanced analytics, there is an understanding that the challenges of tomorrow cannot be solely addressed by today's people, processes, and products. There is

still considerable mystery hype and fear about AI in today's world. A considerable amount of current discourse focuses on a dystopian future that could adversely affect humanity. Such opinions with understandable fear of the unknown don't consider the history of human innovation, the current state of business and technology, or the primarily augmentative nature of tomorrow's AI. This book demystifies AI for the enterprise. It takes readers from the basics, definitions, state of the art, etc. to a multi-industry journey and concludes with expert advice on everything an organization must do to succeed. Along the way, we debunk myths, provide practical pointers, and include best practices with applicable vignettes. AI brings to enterprise the capabilities that promise new ways by which professionals can address both mundane and interesting challenges more efficiently, effectively, and collaboratively with humans. The opportunity for tomorrow's enterprise is to augment existing teams and resources with the power of AI in order to gain competitive advantage, discover new business models, establish or optimize new revenues, and achieve better customer and user satisfaction.

Breaking Point Rebecca Schwartz Greene, 2023-01-03 WINNER SOCIETY FOR MILITARY HISTORY DISTINGUISHED BOOK AWARDS FIRST BOOK. This book informs the public for the first time about the impact of American psychiatry on soldiers during World War II. Breaking Point is the first in-depth history of American psychiatry in World War II. Drawn from unpublished primary documents, oral histories, and the author's personal interviews and correspondence over years with key psychiatric and military policymakers, it begins with Franklin Roosevelt's endorsement of a universal Selective Service psychiatric examination, followed by Army and Navy pre- and post-induction examinations. Ultimately, 2.5 million men and women were rejected or discharged from military service on neuropsychiatric grounds. Never before or since has the United States engaged in such a program. In designing Selective Service Medical Circular No. 1, psychiatrist Harry Stack Sullivan assumed psychiatrists could predict who might break down or falter in military service or even in civilian life thereafter. While many American and European psychiatrists questioned this belief, and huge numbers of American psychiatric casualties soon raised questions about screening's validity, psychiatric and military leaders persisted. In 1942 and 1943, in endorsing ever-tougher screening, and little else. Soon, families complained of fathers and teens being drafted instead of being identified as psychiatric 4Fs, and Blacks and Native Americans among others complained of bias. A frustrated General George S. Patton famously slapped two malingering neuropsychiatric patients in Sicily, a sentiment shared by Marshall and Eisenhower, though they favored a tamer style. Yet psychiatric rejections, evacuations, and discharges mounted. While psychiatrist Roy Grinker and a few others treated soldiers close to the front in Tunisia in early 1943, this was the exception. But as demand for manpower soared, and psychiatrists finally went to the field and saw that combat itself, not predisposition, precipitated breakdown, leading military psychiatrists switched their emphasis from screening to prevention and treatment. But this switch was too little, too late, and slowed by a year-long series of Inspector General investigations, even while numbers of psychiatric casualties soared. Ironically, despite and even partly because of psychiatrists' wartime performance, plus the emotional toll of war, postwar America soon witnessed a dramatic

growth in numbers popularity and influence of the profession culminating in the National Mental Health Act 1946 But veterans with PTSD not recognized until 1980 were largely neglected
