

The cover art features a vibrant yellow background. A large, multi-colored DNA double helix, with blue, orange, green, and purple strands, winds diagonally from the top right towards the bottom right. Three monarch butterflies, with their characteristic orange and black wings, are depicted in flight. One is in the upper left, another in the center, and a third in the lower right, appearing to fly along the path of the DNA helix.

Gender & Sexuality For Beginners Jaimee Garbacik,2013-06-11 What does sexual orientation mean if the very categories of gender are in question How do we measure equality when our society's definitions of male and female leave out much of the population There is no consensus on what a real man or woman is where one's sex begins and ends or what purpose the categories of masculine and feminine traits serve While significant strides have been made in recent years on behalf of women's gay and lesbian rights there is still a large division between the law and day to day reality for LGBTQIA and female identified individuals in American society The practices media outlets and institutions that privilege heterosexuality and traditional gender roles as natural need a closer examination Gender Sexuality For Beginners considers the uses and limitations of biology in defining gender Questioning gender and sex as both categories and forms of compulsory identification it critically examines the issues in the historical and contemporary construction meaning and perpetuation of gender roles Gender Sexuality For Beginners interweaves neurobiology psychology feminist queer and trans theory as well as historical gay and lesbian activism to offer new perspectives on gender inequality ultimately pointing to the clear inadequacy of gender categories and the ways in which the sex gender system oppresses us all

Natural Kinds and Genesis Stewart Umphrey,2016-08-22 In Natural Kinds and Genesis The Classification of Material Entities Stewart Umphrey raises and answers two questions What is it to be a natural kind And are there in fact any natural kinds First using the everyday understanding of things he argues that natural kinds may be understood as classes or as types and that the members or tokens of such kinds are individual continuants A continuant is essentially a being in becoming a material thing which changes and yet remains the same in virtue of its nature or essence as long as it exists In the primary sense of the term then a natural kind is a class whose members closely resemble one another substantially in virtue of their essences Alternatively it is a type whose tokens exemplify it in virtue of their essences To answer the second question one must make use of relevant scientific theories as well Umphrey agrees with scientific essentialists that there are natural kinds but he argues that most of the chemical physical and biological kinds posited in current theories are not natural kinds in the primary sense of the term The natural kinds realism he affirms is thus quite restricted it requires the existence of enduring things which closely resemble one another in virtue of their essences and such things exist apparently only if they have come

into being or emerged in the course of symmetry breaking events Natural Kinds and Genesis will be of interest to philosophers of science and to those interested in the metaphysics of natural kinds and their members
