Introductory Philosophy

Charles A. Dubray, Charles A. Dubray Sm, Brother Hermenegild, 2014-10-11 The efforts which have been made in recent years to provide the beginner in philosophy with a ten book suited to his needs are justified both by the importance of the subject and by the requirements of educational method It is obvious that an introduction should really introduce in other words that it should present philosophy in such a way as to arouse the student's interest gift him a firm grasp of essentials and encourage him to further study But how these results are to be secured is still an open question The books that have so far appeared have each from its own point of view distinct advantage either as outlining the history of philosophical problems or as setting forth the claims of rival systems or as explaining the principles which serve as the foundation of some special system and a basis of criticism in discussing variant theories An introduction that will combine these several utilities seems to be our present need Dr Dubray's aim in this volume is to lead the student by easy approaches into the field of philosophy and to show him its divisions with their several problems and the solutions which these have received In accordance with the principles of correct method the knowledge which the student has already acquired is made to serve as the starting point and from this he is led on to the consideration of more abstract philosophical concepts and theories These again are presented in clear statement and orderly sequence with sufficient indication of outstanding questions yet without the mass of detail which sometimes destroys proportion or results in narrowness of view At the same time definite conclusions are presented with the evidence on which they rest so that the student may get from his use of the book not merely a lot of vague question but a certain amount of positive knowledge and critical direction for later investigation
