Glenn Lo,2013-08-14 This book is intended for the laboratory component of a typical two semester introductory college chemistry course for science majors Several features differentiate this book from typical laboratory manuals The book is published on demand through Amazon s CreateSpace to minimize cost to the student The experiments are designed to be as simple as possible most are short enough to be completed in 90 minutes while the longer ones can be easily split into two 90 minute sessions if necessary This will allow ample class time for student interaction with the instructor and their peers The

expected results lend themselves to straightforward analysis and interpretation A wide range of laboratory techniques is taught but each experiment should not overwhelm students with too many new techniques to learn Numerous Internet resources videos interactive simulations databases are utilized in the pre and post lab activities Every effort was made to use web resources that are least likely to disappear in the future A website containing instructor s notes corrections sample data updated links to websites etc and Moodle quizzes is maintained by the author Pre lab material is organized into activities instead of separate Background and Pre lab Assignment sections The author recommends in lieu of a pre lab lecture going through the activities during class time with students taking turns reading the passages aloud and answering some of the questions
