Manual Vs Automatic Flash:

Understanding Flash Photography Bryan Peterson, 2011-08-30 Flash is a necessary and immensely creative tool that dramatically increases the opportunities of any amateur photographer. However, many amateurs find flash intimidating, unsure of where to begin. Instead, they continue limiting themselves to shooting only available light. *Understanding Flash Photography* is a guide to off-camera flash, helping free photographers from auto to get the images they want when natural light isn't enough. If you've been afraid to venture past natural light, here is the book that will finally help you explore the exciting possibilities of artificial light. Author Bryan Peterson starts by breaking down how flash works, then dispels the widely held myth that automatic TTL flash exposure is easier, explaining how to quickly master manual flash exposure to control the quality, shape, and direction of light. For the hundreds of thousands who found *Understanding Exposure* an exciting tool in moving past auto exposure in available light, *Understanding Flash Photography* is the essential companion to mastering the often-challenging exposure puzzle. *Introduction to Crime Scene Photography* Edward M. Robinson, 2012-08-15

Introduction to Crime Scene Photography acquaints the reader with the essentials of basic crime scene photography techniques. It looks at the concepts related to composition and relates them to the types of photographs captured by crime scene photographers. It explains how to capture images based on the exposure settings chosen to produce the effect desired. It considers the techniques used needed to control and maximize Depth of Field (DOF) and reviews how the different lenses will affect an image. Organized into seven chapters, the book begins with an overview of crime scene photography and composition, including the three cardinal rules of good photography. It then proceeds with a discussion of the benefits of bounce flash and how to utilize this technique to properly compose the subject of interest. It also explains how to capture any image necessary at the crime scene by combining the concepts of composition, nonflash exposure, DOF, flash exposure, and the use of various types of lenses. In addition, the reader is introduced to various energy sources and filters, digital processing of evidentiary photography, and legal issues related to photographs and digital images. Examples and illustrations are provided throughout to demonstrate how the concepts examined tend to form a sort of symbiotic relationship. This text will benefit scene investigators and photographers, forensic consultants, forensic scientists, undergraduate students in forensic and/or criminal justice programs, law enforcement professionals, and anyone who wants to acquire the skills needed to be a successful crime scene photographer. Contains over 350 high-quality 4-color images. Rules of Thumb are included to highlight key concepts. **Mastering Flash Photography** Susan McCartney, 1997 This guide opens with in-camera flash basics, then moves to topics such as exposure, flash readings, detachable units, flash guide numbers, bounce flash, and fill flash, then covers advanced methods for using off-camera flash, light brackets, power packs, remote triggering, and other techniques. **Popular Photography**, 1999-09 **Popular Photography**, 1999-04 *Manual of Photography* Ralph Jacobson, Sidney Ray, Geoffrey G.
