

INTRODUCTION

Construction surveying (known as "lay-out" or "setting-out") is to stake out reference points and markers that will guide the construction of new structures such as roads or buildings. Construction surveying is generally performing the following tasks:

- Survey existing conditions of the future work site, including topography, existing buildings and infrastructure, and even including underground infrastructure whenever possible; (for example, measuring invert elevations and diameters of sewers at manholes).
- Stake out reference points and markers that will guide the construction of new structures.
- Verify the location of structures during construction.
- Conduct an As-Built surveying: a survey conducted at the end of the construction project to verify that the work authorized was completed to the specifications set on plans.

OBJECTIVE

- Carry out accurate setting out.
- Carry out all the necessary calculations to establish the setting-out points.
- Work as a team in order to execute a large scale surveying work.
- Produce and present an engineering report on an engineering survey work.

THEORY

Setting-out is the translation of construction plans into physical point on the ground that can be used as a basis for the actual construction. The results of construction surveying are seen in almost any urban, suburban and rural. Almost any roadway, building or other man-made improvement probably had some amount of construction surveying involved. Construction surveying provides not only the horizontal location of new structure, but also the vertical information required to ensure that surfaces drain or pipes flow as required. The layout, or stakeout, survey consists of locating and marking (staking) horizontal and vertical control points to guide construction crews, and giving line and grade as needed to establish additional control points and to reestablish disturbed stakes.

The setting out surveying will start with calculates information from the drawings to ensure that:

- Buildings can be positioned correctly along with all the necessary structural components within it.
