Network Coding and Subspace Designs Marcus Greferath, Mario Osvin Pavčević, Natalia Silberstein, María Ángeles Vázquez-Castro, 2018-01-29. This book, written by experts from universities and major research laboratories, addresses the hot topic of network coding, a powerful scheme for information transmission in networks that yields near optimal throughput. It introduces readers to this striking new approach to network coding in which the network is not simply viewed as a mechanism for delivering packets but rather an algebraic structure named the subspace which these packets span. This leads to a new kind of coding theory employing what are called subspace codes. The book presents selected highly relevant advanced research output on Subspace Codes and Rank Metric Codes, Finite Geometries and Subspace Designs, Application of Network Coding Codes for Distributed Storage Systems. The outcomes reflect research conducted within the framework of the European COST Action IC1104 Random Network Coding and Designs over $GF(q)$. Taken together, they offer communications engineers, R & D engineers, researchers, and graduate students in Mathematics, Computer Science, and Electrical Engineering a comprehensive reference guide to the construction of optimal network codes as well as efficient encoding and decoding schemes for a given network code.

Open Problems in Algebraic Combinatorics Christine Berkesch, Benjamin Brubaker, Gregg Musiker, Pavlo Pylyavskyy, Victor Reiner, 2024-08-21. In their preface, the editors describe algebraic combinatorics as the area of combinatorics concerned with exact, as opposed to approximate, results and which puts emphasis on interaction with other areas of mathematics such as algebra, topology, geometry, and physics. It is a vibrant area which saw several major developments in recent years. The goal of the 2022 conference Open Problems in Algebraic Combinatorics 2022 was to provide a forum for exchanging promising new directions and ideas. The current volume includes contributions coming from the talks at the conference as well as a few other contributions written specifically for this volume. The articles cover the majority of topics in algebraic combinatorics with the aim of presenting recent important research results and also important open problems and conjectures encountered in this research. The editors hope that this book will facilitate the exchange of ideas in algebraic combinatorics.

Applications of Group Theory in Cryptography Delaram Kahrobaei, Ramón Flores, Marialaura Noce, Maggie E. Habeeb, Christopher Battarbee, 2024-03-25 This book is intended as a comprehensive treatment of group based cryptography accessible to both mathematicians and computer scientists with emphasis on the most recent developments in the area. To make it accessible to a broad range of readers the authors started with a treatment of elementary topics in group theory combinatorics and complexity theory as well as providing an overview of classical public key cryptography. Then some algorithmic problems arising in group theory are presented and cryptosystems based on these problems and their respective cryptanalyses are described. The book also provides an introduction to ideas in quantum cryptanalysis especially with respect to the goal of post quantum group based cryptography as a candidate for quantum resistant cryptography. The final part of the book provides a description of various classes of groups and their suitability as platforms for group based cryptography. The book is a monograph addressed to graduate students and researchers in both mathematics and computer science.
