Integral Green Slovenia Darja Piciga, Alexander Schieffer, Ronnie Lessem, 2016-06-03 Ronnie Lessem and Alexander Schieffer's Integral Green Society and Economy series has three overarching aims The first is to link together two major movements of our time one philosophical the other practical The philosophical movement is towards what many today are calling an integral age while the practical is the green movement duly aligned with that of sustainable development The second is to blend together elements of nature and community culture and spirituality science and technology politics and economics thus serving to bring about an integral green vision albeit with a focus on business and economics As such the authors transcend the limitations to sustainable development and environmental economics which are overly ecological if not also technological in orientation and exclude social and cultural elements Thirdly this particular volume with Darja Piciga focuses specifically on Slovenia as well as on Europe generally drawing on the particular issues and capacities that this country and continent represents particularly for sustainable development and social knowledge based economy The emphasis on Slovenia arose not only because it lies at the heart of Europe but because a specific movement for an Integral Green Slovenian Society and Economy has been co evolved there by the three editors in conjunction with Slovene organisations communities and movements with a view to integrating existing and emerging knowledge resources initiatives and practices into a model as an alternative to austerity for Slovenia and other European countries

High Performance Computing in Science and Engineering '14 Wolfgang E. Nagel, Dietmar H. Kröner, Michael M. Resch, 2015-02-14 This book presents the state of the art in supercomputer simulation It includes the latest findings from leading researchers using systems from the High Performance Computing Center Stuttgart HLRS The reports cover all fields of computational science and engineering ranging from CFD to computational physics and from chemistry to computer science with a special emphasis on industrially relevant applications Presenting findings of one of Europe's leading systems this volume covers a wide variety of applications that deliver a high level of sustained performance The book covers the main methods in high performance computing Its outstanding results in achieving the best performance for production codes are of particular interest for both scientists and engineers The book comes with a wealth of color illustrations and tables of results

Acute and chronic changes in postural control in response to different physiological states and external environmental conditions Nejc Sarabon,Jan Babic,Urs Granacher,Thierry Paillard,2023-04-04 **School-based nutrition and physical activity interventions among children and adolescents** Shooka Mohammadi ,Hui Chin Koo,Ai Kah Ng,2025-04-07 The

increasing prevalence of obesity sedentary lifestyle and unhealthy eating habits among children and adolescents is very concerning The main risk factors that lead to childhood weight problems and obesity are an increase in meals eaten outside of the home a rise in access to high fat foods high consumption of energy packed foods a sedentary lifestyle or skipping breakfast This is concerning as obesity inadequate physical activity PA and unhealthy diets are associated with chronic diseases Therefore promoting healthy eating and sufficient PA among children and adolescents has become a research priority and an important public health concern The World Health Organization WHO considers schools a critical setting for improving public healthy eating and decreasing the risk of unhealthy weight gain in childhood In particular environmental interventions are recommended as they are more likely to lead to behavioural change Thus promoting adequate PA and a healthy diet among school aged children is essential *Scientific and Technical Aerospace Reports* ,1980 Virtual Plants: Modeling Plant Architecture in Changing Environments Katrin Kahlen,Hartmut Stützel,2017-02-07 Plant architecture is a major determinant of the resource use efficiency of crops The architecture of a plant shows ontogenetic structural changes which are modified by multiple environmental factors Plant canopies are exposed to natural fluctuations in light quantity and the dynamically changing canopy architecture induces local variations in light quality Changing temperature conditions or water availability during growth additionally affect plant architecture and thus crop productivity because plants have various

options to adapt their architecture to the available resources Meeting the challenge of ensuring food security we must understand the plant s mechanisms for integrating and responding to an orchestra of environmental factors Virtual plants describe plant architecture in silico Virtual plants have the potential to help us understanding the complex feedback processes between canopy architecture multiple environmental factors and crop productivity As a research tool they have become increasingly popular within the last decade due to their great power of realistically visualizing the plant s architecture This Research Topic highlights current research carried out on modeling plant architecture in changing environments

Introduction to School Counseling Jered B. Kolbert,Laura M. Crothers,Tammy L. Hughes,2022-12-27

Aerospace Health and Safety: Today and the Future Irina Mordukhovich,Mardi A. Crane-Godreau,Eileen Mcneely,Christopher Scheibler,2023-11-20 Aviation plays vital roles in commerce defense science and leisure travel Irrespective of the purpose of flight crew and passengers are challenged by

exposure to a variety of environmental conditions that can differ widely from work and travel environments on the surface of the Earth. With anticipated changes in aviation and space technology, new challenges to the health and safety of crew and passengers can be expected. In this Research Topic, we welcome contributions from those whose work and interests are relevant to the health and safety of crew and passengers. This includes but is not limited to health and safety professionals, FAA examiners, corporate medical officers, aerospace and occupational physicians, physiologists, military and scientific team members, public health professionals, as well as engineers who are tasked with crew and passenger health and safety design projects. While 4.1 billion passengers fly on commercial airlines annually, and this figure is even higher when taking into account privately owned aircraft and military flight, for the most part, aviation is safe. Passengers do arrive at their destinations with little concern to their own well-being, and flight is generally well tolerated. However, older flyers, people with diagnosed or undiagnosed preexisting disease, and other vulnerable passengers such as young children and pregnant women may be at risk of complications, and crew may be at special risk due to the frequency and duration of their many flight-related exposures. Health and safety issues for crew and passengers include but are not limited to potentially severe circadian rhythm disruption, potential health effects of low-level cosmic ionizing radiation exposure at altitude, reduced oxygen delivery and tissue hypoxia at cabin pressurization, cabin air contamination by engine gases, toxic materials used in uniforms and some cabin seat materials, occupational noise, pesticides used for cabin disinsection, lack of adequate crew rest on layovers or between flights, cardiovascular demands of flight, and effects of flight-related dehydration. The current absence of screening protocols, especially in the context of a rising number of elderly and vulnerable flyers, lack of healthy nutrition at airports and in flight, availability of food and hydration, as well as adequate cabin temperature under delay conditions, effects of alcohol use on flight-related physiological and behavioral health risks, anxiety and psychological distress associated with air travel, the effects of long-haul or ultra-long-haul flights on thromboembolic events, as well as smoking cessation efforts and related psychological outcomes, job-related stress and harassment among crew, cosmic ionizing and non-ionizing radiation exposure, have drawn attention, as have historic exposures of crew and passengers to second-hand cigarette smoke. The threat of political and interpersonal violence and altercations involving aviation cannot be overlooked. On-board medical emergencies run a wide gamut, and the capacity to respond becomes more problematic as the duration of flights becomes longer or in the case of flight over oceans and the poles. In addition, in-flight and post-flight embolisms and myocardial infarctions are more prevalent than might be expected. We hence encourage manuscripts that address in-flight medical response, including the capabilities on different types of aircraft, on potential interventions by crew and medical volunteers. In addition, aviation as a vector for the carriage of disease is a significant concern to public health and security of populations world-wide, and we welcome submissions regarding infectious disease epidemiology and medicine as it relates to air travel. Insects and occasional unplanned travel by birds and rodents can present additional public health concerns. We are approaching an era

where space travel may soon be increasingly common Future flights for near Earth orbit by leisure travelers and as well as travel to the moon and Mars raise a host of new questions with health and safety implications What are the proposed health and safety accommodations going to be Who will be allowed to travel Perhaps the most interesting question is who will make the rules
