Latex Concrete Habitat:

Latex Concrete Habitat Albert Knott and Ge Knott - Nez, Albert Knott, George Nez, 2005 In many war torn and poverty stricken regions the indigenous architecture has been heavy mud and wattle roofs on thick mud walls These structures while cool in the summer are of very low strength are maintenance intensive are time consuming to build and are largely in massive disrepair Replacing these mud structures with the light weight roofs of latex concrete produces a permanent architecture significantly more safe and strong of very low maintenance and of remarkably low cost as the roofs can be built by available unskilled labor The time required for reconstruction is considerably shorter than the time required to replace the older heavy construction and the self help characteristic of this new form of construction leads to more rapid recovery from disaster This how to do it manual teaches people how to build these new roofs
