Mobile Robot: Motion Control and Path Planning Ahmad Taher Azar, Ibraheem Kasim Ibraheem, Amjad Jaleel Humaidi, 2023-06-30 This book presents the recent research advances in linear and nonlinear control techniques From both a theoretical and practical standpoint motion planning and related control challenges are key parts of robotics Indeed the literature on the planning of geometric paths and the generation of time based trajectories while accounting for the compatibility of such paths and trajectories with the kinematic and dynamic

constraints of a manipulator or a mobile vehicle is extensive and rich in historical references Path planning is vital and critical for many different types of robotics including autonomous vehicles multiple robots and robot arms In the case of multiple robot route planning it is critical to produce a safe path that avoids colliding with objects or other robots When designing a safe path for an aerial or underwater robot the 3D environment must be considered As the number of degrees of freedom on a robot arm increases so does the difficulty of path planning As a result safe pathways for high dimensional systems must be developed in a timely manner Nonetheless modern robotic applications particularly those requiring one or more robots to operate in a dynamic environment e g human robot collaboration and physical interaction surveillance or exploration of unknown spaces with mobile agents etc pose new and exciting challenges to researchers and practitioners For instance planning a robot's motion in a dynamic environment necessitates the real time and online execution of difficult computational operations The development of efficient solutions for such real time computations which could be offered by specially designed computational architectures optimized algorithms and other unique contributions is thus a critical step in the advancement of present and future oriented robotics
