Learning MATLAB Walter Gander, 2015 This comprehensive and stimulating introduction to Matlab a computer language now widely used for technical computing is based on an introductory course held at Qian Weichang College Shanghai University in the fall of 2014 Teaching and learning a substantial programming language aren't always straightforward tasks Accordingly this textbook is not meant to cover the whole range of this high performance technical programming environment but to motivate first and second year undergraduate students in mathematics and computer science to learn Matlab by studying representative problems developing algorithms and programming them in Matlab While several topics are taken from the field of scientific computing the main emphasis is on programming A wealth of examples are completely discussed and solved allowing students to learn Matlab by doing by solving problems comparing approaches and assessing the proposed solutions

Programming and Engineering Computing with MATLAB 2018 Huei-Huang Lee, 2018 This book is designed for undergraduate students completely new to programming with MATLAB Case studies and examples are used extensively throughout this book and are at the core of what makes this book so unique The author believes that the best way to learn MATLAB is to study programs written by experienced programmers and that the quality of these example programs determines the quality of the book The examples in this book are carefully designed to teach you MATLAB programming as well as to inspire within you your own problem solving potential Most of the examples used in this book are designed to solve a whole class of problems rather than a single specific problem A learn by doing teaching approach is used all through the book You are guided to tackle a problem using MATLAB commands first and then the commands are explained line by line This process of learning through hands on experience is one of the most efficient and pain free ways of learning MATLAB This approach together with the extensive use of ordered textboxes figures and tables greatly reduces the size of the book while still providing you with a book that's comprehensive and easy to follow The first chapter of this book introduces the MATLAB programming environment and familiarizes you with MATLAB's core functionality Chapters two through nine discuss basic MATLAB functionalities in a progressive and comprehensive way The chapters start out simple and build in complexity as you advance through the book Chapters ten through thirteen cover advanced topics that are particularly useful in college programs Each chapter consists of sections each covering a topic and providing one or more examples Related MATLAB functions are organized at the end of a section Additional exercise problems are provided at the end of chapters two through nine Examples in each section are presented in a consistent way An example is usually described first followed by a MATLAB script Any resulting text and graphics output and in some cases inputs that are produced from running a script are presented and discussed Finally the remainder of each section is devoted to explaining the purpose of the lines of the script

Exercises in Computational Mathematics with MATLAB Tom Lyche, Jean-Louis Merrien, 2016-08-23 Designed to provide tools for independent study this book contains student tested mathematical exercises joined with MATLAB programming

exercises Most chapters open with a review followed by theoretical and programming exercises with detailed solutions provided for all problems including programs Many of the MATLAB exercises are presented as Russian dolls each question improves and completes the previous program and results are provided to validate the intermediate programs The book offers useful MATLAB commands advice on tables vectors matrices and basic commands for plotting It contains material on eigenvalues and eigenvectors and important norms of vectors and matrices including perturbation theory iterative methods for solving nonlinear and linear equations polynomial and piecewise polynomial interpolation Bzier curves approximations of functions and integrals and more The last two chapters considers ordinary differential equations including two point boundary value problems and deal with finite difference methods for some partial differential equations The format is designed to assist students working alone with concise Review paragraphs Math Hint footnotes on the mathematical aspects of a problem and MATLAB Hint footnotes with tips on programming

Insight Through Computing Charles F. Van Loan,K.-Y. Daisy Fan,2010-01-01 This introduction to computer based problem solving using the MATLAB environment is highly recommended for students wishing to learn the concepts and develop the programming skills that are fundamental to computational science and engineering CSE Through a teaching by examples approach the authors pose strategically chosen problems to help first time programmers learn these necessary concepts and skills Each section formulates a problem and then introduces those new MATLAB language features that are necessary to solve it This approach puts problem solving and algorithmic thinking first and syntactical details second Each solution is followed by a talking point that concerns some related larger issue associated with CSE Collectively the worked examples talking points and 300 homework problems build intuition for the process of discretization and an appreciation for dimension inexactitude visualization randomness and complexity This sets the stage for further coursework in CSE areas
