Publications of National Monetary Commission, 1910 *Handbook of World Exchange Rates, 1590-1914* Markus A Denzel, 2017-03-02 As a world economy emerged from the 16th 17th centuries onwards a global cashless payment system arose This had its base in Europe first in Italy then in the rising regions of the north west with Amsterdam and then London as the central financial market The mutual quotation of exchange rates which provide the data tabulated and analysed here mark the integration into a global network of all areas with significant economic potential The primary aim of this book is to provide a compact account of the exchange rates in all these financial markets from the late 16th century up to the First World War This makes possible an instant conversion between the major world currencies at nearly any date within that period while the important introduction provides the explanation and context of developments The present handbook therefore serves as an invaluable resource for those concerned with all aspects of commercial and financial history

The Theory of Interest Friedrich A. Lutz, This book contains a critical analysis of the main theories of interest which have been published since B hm Bawerk The last part of the book gives an account of the author s own theory The first part which deals with the history of doctrines discusses the theories of B hm Bawerk Wicksell Akerman and Hayek authors who proceed from the assumption of stationary state The second group of authors consists of Walras Irving Fisher and F H Knight who assume a progressive economy in which net saving and investment occur The third group of authors are those who stress the monetary factor The central figure of this part is Keynes but other authors among them Patinkin are also dealt with The theories on the term structure of interest rates are discussed in the last part of the history of doctrines

The author's own theory deals with the problem of the interest rate first in terms of partial equilibrium analysis whereby particular attention is paid to the influence of the banking system on the structure of interest rates. In the final chapter the author proceeds to expound the interest theory in the framework of general equilibrium analysis. A mathematical appendix concludes this book. Friedrich A. Lutz, 1901-1975, taught economics at Princeton University for fifteen years before becoming Professor of Economics at the University of Zurich. He was also the president of the Mont Pelerin Society from 1964-1967.
