

A computer is a **machine** that can be programmed to carry out **sequences of arithmetic or logical operations** automatically. Modern computers can perform generic sets of operations known as **programs**. These programs enable computers to perform a wide range of tasks. A computer system is a "complete" computer that includes the **hardware, operating system** (main software), and **peripheral** equipment needed and used for "full" operation. This term may also refer to a group of computers that are linked and function together, such as a **computer network** or **computer cluster**.

A broad range of **industrial** and **consumer products** use computers as **control systems**. Simple special-purpose devices like **microwave ovens** and **remote controls** are included, as are factory devices like **industrial robots** and **computer-aided design**, as well as general-purpose devices like **personal computers** and **mobile devices** like **smartphones**. Computers power the **internet**, which links hundreds of millions of other computers and users.

Computational Linguistics and Intelligent Text Processing Alexander Gelbukh,2015-04-09 The two volumes LNCS 9041 and 9042 constitute the proceedings of the 16th International Conference on Computational Linguistics and Intelligent Text Processing CICLing 2015 held in Cairo Egypt in April 2015 The total of 95 full papers presented was carefully reviewed and selected from 329 submissions They were organized in topical sections on grammar formalisms and lexical resources morphology and chunking syntax and parsing anaphora resolution and word sense disambiguation semantics and dialogue machine translation and multilingualism sentiment analysis and emotion detection opinion mining and social network analysis natural language generation and text summarization information retrieval question answering and information extraction text classification speech processing and applications Computational Techniques for Text Summarization based on Cognitive Intelligence V. Priya,K. Umamaheswari,2023-03-17 The book is concerned with contemporary methodologies used for automatic text summarization It proposes interesting approaches to solve well known problems on text summarization using computational intelligence CI techniques including cognitive approaches A better understanding of the cognitive basis of the summarization task is still an open research issue an extent of its use in text summarization is highlighted for further exploration With the ever growing text people in research have little time to spare for extensive reading where summarized information helps for a better understanding of the context at a shorter time This book helps students and researchers to automatically summarize the text documents in an efficient and effective way The computational approaches and the research techniques presented guides to achieve text summarization at ease The summarized text generated supports readers to learn the context or the domain at a quicker pace The book is presented with reasonable amount of illustrations and examples convenient for the readers to understand and implement for their use It is not to make readers understand what text summarization is but for people to perform text summarization using various approaches This also describes measures that can help to evaluate determine and explore the best possibilities for text summarization to analyse and use for any specific purpose The illustration is based on social media and healthcare domain which shows the possibilities to work with any domain for summarization The new approach for text summarization based on cognitive
