Chapters on methods for validity testing in visual spatial processing, speed and language domains, and with cognitive screening instruments and personality inventories. Chapter on methods for interpreting multiple PVTs in combination. Chapters on additional populations: military personnel, children and adolescents, and clinical problems: dementia, somatoform conversion disorder. Chapters on research methods for validating PVTs, base rates of feigned mild traumatic brain injury, and more.

Sexual Offending Amy Phenix, Harry M. Hoberman, 2015-12-07. This expert reference provides a broad comprehensive review of the major domains of sexual offending. Beginning with an integrated etiological model of sexual offending, chapters follow addressing the primary predisposing conditions related to sexual offending: e.g., pedophilic, hebephilic, paraphilic, rape, and non-contact paraphilic disorders, hypersexuality, and personality factors. In addition, special subgroups of sexual offenders: females, youth, and the intellectually disabled are considered. Both broad and specific perspectives on the assessment of sexual offenders are provided. Overviews are offered of clinical and forensic evaluations of such offenders and the utility of structured psychological assessment. A novel conceptual model of risk assessment is proposed. More specifically, each of the primary approaches or instruments related to risk assessment of sexual offending are addressed: the Static risk assessment measures, the Sex Offender Risk Appraisal Guide, structured professional judgment, and the varied measures of dynamic or criminogenic needs assessment. Finally, multiple aspects of management of sexual offenders are discussed, including models of psychosocial treatment, the question of the effectiveness of such treatment, biological interventions, civil commitment, circles of support, and the containment approach to community management. Chapters are authored by both prominent experts and experienced professionals for a breadth of perspective. Among the topics covered: Pedophilic, Hebephilic, Rape, Paraphilic Disorders, and the variety of Non-Contact sexual offending conditions; Personality related conditions, their association with sexual offending, motivators, and disinhibition in context; Disorders of hypersexuality; Assessments of sexual offenders including the role of psychological testing, clinical interview approaches, as well as forensic evaluations; Conceptual models of risk assessment; discussion of specific static, dynamic, structured clinical risk assessment approaches; Models of reviews of treatment outcome with sexual offenders including psychotherapy, psychopharmacology, and castration; the containment approach; civil commitment; circles of support; Overview of public policy issues; an evidence based perspective on sex offender registration.

and residential restrictions This breadth of material in Sexual Offenders will help practitioners gain multiple levels of clinical insight as well as giving them up to date practical tools and techniques for working with this problematic class of individuals

Sensory Processing Across the Lifespan: A 25-Year Initiative to Understand Neurophysiology, Behaviors and Treatment Effectiveness for

Sensory Processing Lucy Jane Miller, Elysa Jill Marco, Stephen Camarata, 2021-06-04 **The Role of Working Memory and Executive Function in Communication under Adverse Conditions** Mary Rudner, Carine Signoret, 2016-06-20

Communication is vital for social participation However communication often takes place under suboptimal conditions This makes communication harder and less reliable leading at worst to social isolation In order to promote participation it is necessary to understand the mechanisms underlying communication in different situations Human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language For communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to This process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment The extent to which these factors interact to generate adverse conditions may differ across the lifespan Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition Further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication

under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness **Speech and Language Editor's Pick**
