Targeting social assistance in fragile settings: An experiment on community-based targeting Abay, Kibrom A., Berhane, Guush, Gilligan, Daniel O., Tafere, Kibrom, Taffesse, Alemayehu Seyoum, 2024-11-13 Targeting is an important but challenging process in the design and delivery of social and humanitarian assistance programs Community based targeting CBT approaches are often preferred for their local information advantages especially when data driven methods are not feasible However how different variants of CBT approaches fare under various constraints and environments remains unclear For example it is not obvious whether agents involved in CBT maximize the number of beneficiaries or the intensity of transfers when given different levels of discretion or they face budget constraints We implemented a clustered randomized control trial among community leaders in 180 villages in Ethiopia to evaluate how community leaders target and allocate resources when they face budget constraints and are in the presence absence of discretion We find that under resource constraints community leaders prefer to maximize the number of beneficiaries even at the expense of thinly spreading budgets reducing average transfers to beneficiaries Community leaders are keen to minimize exclusion errors even at the expense of increased inclusion errors suggesting that community leaders may be sensitive to potential communal repercussions and hence prefer to accommodate beneficiaries who would otherwise be excluded based on survey based measures and indicators of poverty Consistent with this we find that offering community leaders some level of discretion helps them reduce exclusion errors and include those most deprived or those affected by armed conflicts Finally we find that community leaders are more vulnerable to favoritism when real stakes rather than hypothetical are involved budgets are relatively larger and they lack discretion We offer nuanced evidence about the implications of implementing CBT designs in the absence of incentives for community leaders to reveal how they use local information

Guide to Wireless Sensor Networks Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-05-29 Overview and Goals Wireless communication technologies are undergoing rapid advancements The last few years have experienced a steep growth in research in the area of wireless sensor networks WSNs In WSNs communication takes place with the help of spatially distributed autonomous sensor nodes equipped to sense specific information WSNs especially the ones that have gained much popularity in the recent years are typically ad hoc in nature and they inherit many characteristics/features of wireless ad hoc networks such as the ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager/router/access point or a switch These features help to set up WSNs fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations WSNs find a variety of applications in both the military and the civilian population worldwide such as in cases of enemy intrusion in the battlefield object tracking habitat monitoring patient monitoring fire detection and so on Even though sensor networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to coverage and deployment scalability quality of service size computational power energy efficiency and security

both theoretical and applied journals The high and insistent demand for in depth and precise accounts of multidimensional poverty measurement motivates this book which is aimed at graduate students in quantitative social sciences researchers of poverty measurement and technical staff in governments and international agencies who create multidimensional poverty measures The book is organized into four elements The first introduces the framework for multidimensional measurement and provides a lucid overview of a range of multidimensional techniques and the problems each can address The second part gives a synthetic introduction of counting approaches to multidimensional poverty measurement and provides an in depth account of the counting multidimensional poverty measurement methodology developed by Alkire and Foster which is a straightforward extension of the well known Foster Greer Thorbecke poverty measures that had a significant and lasting impact on income poverty measurement The final two parts deal with the pre estimation issues such as normative choices and distinctive empirical techniques used in measure design and the post estimation issues such as robustness tests statistical inferences comparisons over time and assessments of inequality among the poor

Handbook of Survey Methodology for the Social Sciences Lior Gideon,2012-06-21 Surveys enjoy great ubiquity among data collection methods in social research they are flexible in questioning techniques in the amount of questions asked in the topics covered and in the various ways of interactions with respondents Surveys are also the preferred method by many researchers in the social sciences due to their ability to provide quick profiles and results Because they are so commonly used and fairly easy to administer surveys are

often thought to be easily thrown together But designing an effective survey that yields reliable and valid results takes more than merely asking questions and waiting for the answers to arrive Geared to the non statistician the Handbook of Survey Methodology in Social Sciences addresses issues throughout all phases of survey design and implementation Chapters examine the major survey methods of data collection providing expert guidelines for asking targeted questions improving accuracy and quality of responses while reducing sampling and non sampling bias Relying on the Total Survey Error theory various issues of both sampling and non sampling sources of error are explored and discussed By covering all aspects of the topic the Handbook is suited to readers taking their first steps in survey methodology as well as to those already involved in survey design and execution and to those currently in training Featured in the Handbook The Total Survey Error sampling and non sampling errors Survey sampling techniques The art of question phrasing Techniques for increasing response rates A question of ethics what is allowed in survey research Survey design face to face phone mail e mail online computer assisted Dealing with sensitive issues in surveys Demographics of respondents implications for future survey research Dealing with nonresponse and nonresponse bias The Handbook of Survey Methodology in Social Sciences offers how to clarity for researchers in the social and behavioral sciences and related disciplines including sociology criminology criminal justice social psychology education public health political science management and many other disciplines relying on survey methodology as one of their main data collection tools

Unsupervised Feature Extraction Applied to Bioinformatics Y-h. Taguchi, 2024-08-31 This updated book proposes applications of tensor decomposition to unsupervised feature extraction and feature selection The author posits that although supervised methods including deep learning have become popular unsupervised methods have their own advantages He argues that this is the case because unsupervised methods are easy to learn since tensor decomposition is a conventional linear methodology This book starts from very basic linear algebra and reaches the cutting edge methodologies applied to

difficult situations when there are many features variables while only small number of samples are available The author includes advanced descriptions about tensor decomposition including Tucker decomposition using high order singular value decomposition as well as higher order orthogonal iteration and train tensor decomposition The author concludes by showing unsupervised methods and their application to a wide range of topics Schizophrenia Bulletin ,1992 **OSU Statistics**
