

Engine and Track Controls, Switches and Instruments (continued)

Engine Controls

Engine Speed

A hand-operated throttle lever in the cab, controls the speed of the engine.

Move the lever to increase or decrease the engine speed. The lever can be left in any position between idle and maximum as required.

Engine Start / Stop

To start and stop the engine use the starter switch, see Switches on the following page.

Switches

Starter Switch

This is operated by the starter key. It has four positions. The key can only be removed when in the "0" position.

- 0 Off/Stop Engine**
Turn the key to this position to stop the engine. Make sure the controls are in neutral and the excavator and dozer are lowered before stopping the engine.
- I On**
Turning the key in this position connects the battery to the electrical circuits. The key will spring back to this position when released from it.
- II Heat Position**
Holding the key in this position switches on the glow plugs. The glow plugs warm the engine combustion chambers for cold weather starting. Do not hold in this position for more than 15 seconds. The key will spring back to I when released.
- III Start**
Operates the starter motor to turn the engine.

Note: Do not operate the starter for more than 30 seconds at one time.
