Laudan's Progress and Its Problems

DAVID L. HULL, *Philosophy, University of Wisconsin, Milwaukee*

Anyone teaching a course in the philosophy of science is presented with the problem of finding a text which carries recent disputes beyond the received doctrines set out in Hempel's *Philosophy of Natural Science* [1], the heresies which flowed from Kuhn's *The Structure of Scientific Revolutions* [3], and criticisms of both these positions collected in Suppe's *The Structure of Scientific Theory* [5]. Everyone seems to agree that neither logical empiricist philosophy of science nor the relativistic reactions to it are good enough. What has been needed for some time is a book which presents a fully developed, self-contained alternative to these two extremes, which is nevertheless easy to follow. Larry Laudan's *Progress and Its Problems* at long last does just that. Not everyone is likely to swallow Laudan's position whole, especially in regard to the short shrift he gives to empirical truth, but for pedagogic purposes, his book could not be better. The exposition is clear, the historical examples which he presents both to illustrate and to test his views are historically accurate, and Laudan's combination of the traditional epistemological elements is sufficiently novel to force both students and teachers out of their familiar mental ruts.

1. PROGRESS THROUGH PROBLEM SOLUTION.

As welcome as Laudan's book is as a text, it is primarily a contribution to the professional literature in philosophy of science and must be evaluated as such. *Progress and Its Problems* is above all else a sustained defense of the role of rationality in all intellectual endeavours, especially science. If cultural relativism were correct, if 'we in the West venerate science, not because it is more rational than its alternatives, but simply because we are a product of a culture that has traditionally set great store by science' (p. 3), then 'it would mean that

Laudan Problem Solving And Is Building:

Building Theories David Danks, Emiliano Ippoliti, 2018-01-18 This book explores new findings on the long neglected topic of theory construction and discovery and challenges the orthodox current division of scientific development into discrete stages the stage of generation of new hypotheses the stage of collection of relevant data the stage of justification of possible theories and the final stage of selection from among equally confirmed theories The chapters written by leading researchers offer an interdisciplinary perspective on various aspects of the processes by which theories rationally should and descriptively are built They address issues such as the role of problem solving and heuristic reasoning in theory building how inferences and models shape the pursuit of scientific knowledge the relation between problem solving and scientific discovery the relative values of the syntactic semantic and pragmatic view of theories in understanding theory construction and the relation between ampliative inferences heuristic reasoning and models as a means for building new theories and knowledge Through detailed arguments and examinations the volume collectively challenges the orthodox view's main tenets by characterizing the ways in which the different stages are logically temporally and psychologically intertwined As a group the chapters provide several attempts to answer long standing questions about the possibility of a unified conceptual framework for building theories and formulating hypotheses **The Relationship Between a Model-building**

Problem-solving Classroom and Conceptual Change Learning John S. Lemberger, 1995 Theory Construction in Second Language Acquisition Geoff Jordan, 2004 Recently many SLA researchers have adopted a postmodernist approach which challenges the assumption that SLA research is a rationalist scientific endeavour The resulting epistemological arguments plus problems of theory proliferation contradicting theories and theory domain hinder progress towards a unified theory of SLA Theory Construction in SLA addresses these problems by returning to first principles it asks whether there is such a thing as reliable knowledge what is special about scientific method and how we can best explain SLA It is the first book to use the philosophy of science in order to examine the epistemological underpinnings of SLA research and evaluate rival theories of SLA Part One explores the central issues in the philosophy of science defends rationality against relativists and offers Guidelines for theory assessment Part Two examines different theories of SLA and evaluates them in terms of how well they stand up to the Guidelines *Formal Theory in Sociology* Jerald Hage, 1994-01-01 A group of renowned sociological theorists analyze why the attempts to make sociological theory formal in the 1960s and early 1970s failed This becomes not only an unusual and interesting analysis in the sociology of knowledge but several of the articles move to the level of analyzing the entire discipline explaining why positivism did not take hold and what are the distinctive characteristics of sociology as a discipline Anyone interested in sociology as a discipline and more specifically sociological theory will find interesting analytical models Problems in Second Language Acquisition Michael H. Long, 2017-09-25 Second language acquisition has an identity problem It is a young field struggling to emerge from the parent fields of education and applied

linguistics In his new book *Problems in Second Language Acquisition* Mike Long proposes a way to help second language acquisition develop a systematic and coherent focus using the philosophy of science as the lens The volume is neatly organized into three parts theory research and practice This structure allows a focus on areas of SLA of interest to many in the field These include theory proliferation and comparative theory evaluation the Critical Period Hypothesis and negative feedback and the practice of synthetic language teaching The controversial volume will be of interest to researchers educators and graduate students in second language acquisition applied linguistics TESOL and linguistics programs It may be recommended as additional reading for an introductory SLA course in order to stimulate class discussions

Systematic Theology as a Rationally Justified Public Discourse about God Michael Agerbo Mørch, 2023-01-23 For centuries it has been discussed whether systematic theology is a scientific discipline But it is not obvious what is meant by either systematic theology or scientific discipline Michael Agerbo Mørch presents an understanding of systematic theology as a tripartite discipline and science as a rationally justified public discourse about a given topic Systematic theology is shown to meet the most generally accepted criteria for scientific work since its theories can be tested and even falsified in an intersubjective setting This can be done by the most proper tool we have for assessing and comparing scientific theories which is coherence theory Therefore even though systematic theology is a distinct and normative discipline it is not compromising for its theories because it can present its theses in a transparent way that can be checked and criticized by peers and compared to relevant alternatives As such the book shows that systematic theology is a scientifically strong discourse that meets accepted criteria to the same degree as other disciplines

Rasch Models for Solving Measurement Problems George Engelhard, Jr., Jue Wang, 2020-12-13 This book introduces current perspectives on Rasch measurement theory with an emphasis on developing Rasch based scales Rasch measurement theory represents a paradigm shift in measurement theory away from classical test theory and creates a framework for scaling that can yield invariant measurement Rasch Models for Solving Measurement Problems Invariant Measurement in the Social Sciences is a broadly accessible text Authors George Engelhard Jr and Jue Wang introduce Rasch measurement theory step by step with chapters on scale construction evaluation maintenance and use Points are illustrated and techniques are demonstrated through an extended example The Food Insecurity Experience FIE Scale The Rasch analyses in the book are run using the Facets computer program Facets syntax and R code for the ERMA program created by the authors to obtain parameter estimates and to examine model data fit together with sample data sets are all available on a website for the book

Mathematics Education as a Research Domain: A Search for Identity Anna Sierpinska, Jeremy Kilpatrick, 2013-03-14 No one disputes how important it is in today's world to prepare students to understand mathematics as well as to use and communicate mathematics in their future lives That task is very difficult however Refocusing curricula on fundamental concepts producing new teaching materials and designing teaching units based on mathematicians common sense or on logic have not resulted in a better understanding of mathematics by more students The

failure of such efforts has raised questions suggesting that what was missing at the outset of these proposals designs and productions was a more profound knowledge of the phenomena of learning and teaching mathematics in socially established and culturally politically and economically justified institutions namely schools Such knowledge cannot be built by mere juxtaposition of theories in disciplines such as psychology sociology and mathematics Psychological theories focus on the individual learner Theories of sociology of education look at the general laws of curriculum development the specifics of pedagogic discourse as opposed to scientific discourse in general the different possible pedagogic relations between the teacher and the taught and other general problems in the interface between education and society Mathematics aside from its theoretical contents can be looked at from historical and epistemological points of view clarifying the genetic development of its concepts methods and theories This view can shed some light on the meaning of mathematical concepts and on the difficulties students have in teaching approaches that disregard the genetic development of these concepts

The Heuristic View Emiliano Ippoliti, Fabio Sterpetti, 2025-10-01 This volume offers a series of thought provoking analyses that explore non mainstream perspectives on knowledge acquisition and scientific discovery A central theme across many of the contributions is the heuristic conception of method a view that finds its philosophical roots in Imre Lakatos's work in the philosophy of mathematics and more distantly in Platonic notions of philosophical inquiry Knowledge acquisition is frequently conceptualized as a form of problem solving and problem solving is typically regarded as a rational endeavor However the dominant view in the philosophy of science has long held that scientific discovery resists systematic explanation in terms of logic and rationality If an alternative account of discovery grounded in these terms can be developed it would represent a significant theoretical advancement The essays collected in this book critically assess the promise and limitations of such non standard accounts and they investigate the possibility of framing scientific discovery within a logical and rational framework This volume will be of particular interest to scholars in the philosophy of science epistemology philosophy of mathematics and philosophy of logic as well as to scientists engaged in theoretical inquiry and graduate students working in these or related areas

Scientific Cognition, Semiotics, and Computational Agents: Essays in Honor of Lorenzo Magnani - Volume 2 Selene Arfini, 2025-09-19 This book the second of two volumes focuses on scientific cognition computationalism and scholars reception of what Lorenzo Magnani named eco cognitive views on the mind The authors of these chapters address complex questions which regard in part

Magnani's contributions in the field of model based science the role of inferential models in mathematics the transformations and possible applicability of Charles Sanders Peirce's and Immanuel Kant's concepts and insight into current understanding of scientific progress and the still unsolved questions regarding the methodological steps that take researchers to scientific discoveries Some contributions also address the problematic understanding of artificial agents as intelligent how cognition can be discussed within the limits of computationalism and how the eco cognitive perspective on the mind also affects the conception of scientific reasoning and socially constructed phenomena The book is of great interest to those interested in epistemology philosophy of science mathematical logic and AI

Integrative Promise Charles H. Pence, 2025-04-24 This book offers a new approach to the way in which biologists evaluate both the explanations they give of biological phenomena and those they would like to pursue Departing from current scholarship on explanation it draws out a cluster of virtues which unifies some biological explanations and in turn captures part of what makes the life sciences distinctive integrative promise With case studies drawn from a wide variety of historical and empirical domains such

as big data biology model organisms and natural history as well as theoretical connections to a number of other areas in the philosophy of science including mechanism science and values and scientific modeling this work creates a new lens which helps us understand why contemporary life science takes the structure that it does It provides insight for readers in philosophy and history of science as well as biologists interested in the theoretical structure and future of their field

Naturalizing Philosophy of Education Jerome A. Popp,1998 Jerome A Popp examines the role of Dewey based pragmatism in the past present and future of philosophy of education He insists that even though Marx ian utopian thought subjugated Dewey s ideas during the 1970s Dewey s epistemological arguments are directly relevant to contemporary philosophy He contends that not only are Dewey s arguments related to how we think about philosophy of education they actually improve the thinking reflected in the literature Dewey s arguments he demonstrates provide the basis for both a rejuvenated account of conceptual analysis and a criticism of the utopian relativism currently dominating the literature Popp notes that empiricism manifested in the philosophy of education as analytic philosophy holds that scientific findings especially from psychology have no place in philosophy But contemporary writers in the philosophy of science contend that to justify the methods of science we must consider what is known about intelligence and cognitive processes These arguments are relevant to the ways in which we justify claims about proper education Naturalizing epistemology using the results of science in philosophic theories leads to an enhanced account of Dewey s instrumental approach to normative inquiry and strengthens attempts to justify educational practices Dewey s critique of utopian approaches to social theory is bolstered by contemporary arguments in epistemology and the philosophy of science These arguments reject the attempt by some in philosophy of education to solve value questions through an appeal to utopian thinking Popp agrees with Dewey s view that the proper goals of education cannot be stated in these terms

Rethinking Thomas Kuhn's Legacy Yafeng

Shan,2024-08-09 Thomas Kuhn is widely considered as one of the most important philosophers of science in the 20th century and his *The Structure of Scientific Revolutions* is regarded as one of the most influential works in the philosophy of science This book not only revisits his legacy in the history and philosophy of science but also explores and reflects on the prospect of the Kuhnian philosophy Moreover it includes the edited text of Kuhn s *Does Knowledge Grow* which was never published before Comprised of 15 newly written chapters by leading Kuhn scholars and philosophers of science across the globe from ten countries this book is of great interest to researchers and advanced students but also to general readers

Method Matters in Psychology Brian D. Haig,2018-09-25 This book applies a range of ideas about scientific discovery found in contemporary philosophy of science to psychology and related behavioral sciences In doing so it aims to advance our understanding of a host of important methodological ideas as they apply to those sciences A philosophy of local scientific realism is adopted in favor of traditional accounts that are thought to apply to all sciences As part of this philosophy the implications of a commitment to philosophical naturalism are spelt out and a correspondence theory of truth is defended by

showing how it helps explain various features of scientific practice The central chapter of the book presents a broad theory of scientific method that comprises the detection of empirical phenomena and their subsequent understanding by constructing explanatory theories through the use of abductive methods This theory of scientific method is then used as a framework to reconstruct the well known qualitative method of grounded theory and to present a systematic perspective on clinical reasoning and case formulation Relatedly an abductive or explanationist understanding of methods is employed to evaluate the knowledge credentials of evolutionary psychology In addition the conceptual and methodological foundations of a variety of quantitative methods are examined Exploratory factor analysis and tests of statistical significance are given special attention

Search Foundations Sachi Arafat, Elham Ashoori, 2025-02-04 A call to redirect the intellectual focus of information retrieval and science IR the phenomenon of mediation gets at the heart of the human machine relationship Framing IR S more broadly in this way generalizes its problems and perspectives dovetailing them with those shared across disciplines dealing with socio technical phenomena This reorientation of IR S requires imagining it as a new kind of science a science of technology mediated experience STME Arafat and Ashoori not only offer detailed analysis of the foundational concepts underlying IR S and other technical disciplines but also boldly call for a radical systematic appropriation of the sciences and humanities to create a better understanding of the human technology relationship Arafat and Ashoori discuss the notion of progress in IR S and consider ideas of progress from the history and philosophy of science They argue that progress in IR S requires explicit linking between technical and nontechnical aspects of discourse They develop a network of basic questions and present a discursive framework for addressing these questions With this book Arafat and Ashoori provide both a manifesto for the reimagining of their field and the foundations on which a reframed IR S would rest

Philosophies and Theories for Advanced Nursing Practice Janie B. Butts, Karen L. Rich, 2013-12-26 *Philosophies and Theories for Advanced Nursing Practice* Second Edition was developed as an essential resource for advance practice students in master s and doctoral programs This text is appropriate for students needing an introductory understanding of philosophy and how a theory is constructed as well as students and nurses who understand theory at an advanced level The Second Edition discusses the AACN DNP essentials which is critical for DNP students as well as PhD students who need a better understanding of the DNP educated nurse s role *Philosophies and Theories for Advanced Nursing Practice* Second Edition covers a wide variety of theories in addition to nursing theories Coverage of non nursing related theory is beneficial to nurses because of the growing national emphasis on collaborative interdisciplinary patient care The text includes diagrams tables and discussion questions to help students understand and reinforce core content
