guidance and insight into the development process for safety indicators to comply with general classification rule requirements. The utilisation of this guidance will provide tangible benefits as the marine and offshore industry is able to realise the positive results of tangible safety indicators that are developed correctly and managed appropriately throughout the lifecycle of the vessel or platform. In the marine and offshore industry design and equipment configurations vary from one system to the next and systems are in many cases increasingly complex. There are gaps in codes and standards which may lag technological innovations and there are issues related to interfaces between systems. Safety indicators such as risk analyses, FMEA, job safety analyses, management of change procedures, HSQE technical manuals and reliability based maintenance provide a formalised approach to identify hazardous situations, address the gaps and interconnection variances and improve safety, environmental performance and operational downtime. The majority of Classification Societies Class require their clients to develop and submit safety indicators as part of the classification requirements for certain systems and to obtain certain special notations.
