Maths Pmemo June 2015:

Teaching and Learning Secondary School Mathematics Ann Kajander,Jennifer Holm,Egan J Chernoff,2018-10-24 This volume brings together recent research and commentary in secondary school mathematics from a breadth of contemporary Canadian and International researchers and educators It is both representative of mathematics education generally as well as unique to the particular geography and culture of Canada The chapters address topics of broad applicability such as technology in learning mathematics recent interest in social justice contexts in the learning of mathematics as well as Indigenous education The voices of classroom practitioners the group ultimately responsible for implementing this new vision of mathematics teaching and learning are not forgotten Each section includes a chapter written by a classroom teacher making this volume unique in its approach We have much to learn from one another and this volume takes the stance that the development of a united vision supported by both research and professional dialog provides the first step **On Non-Topological Solutions of the A_{2} and B_{2} Chern-Simons System** Weiwei Ao,Chang-Shou Lin,Juncheng Wei,2016-01-25 Click here to view the abstract IntroductionProof of Theorem 1 1 in the caseProof of Theorem 1 1 in the caseAppendixBibliography Irreducible Geometric Subgroups of Classical Algebraic Groups Timothy C. Burness,,Soumaïa Ghandour,Donna M. Testerman,2016-01-25 Let be a simple classical algebraic group over an algebraically closed field of characteristic with natural module Let be a closed subgroup of and let be a non trivial irreducible tensor indecomposable restricted rational module such that the restriction of to is irreducible In this paper the authors classify the triples of this form where is a disconnected maximal positive dimensional closed subgroup of preserving a natural geometric structure on *Global Carleman Estimates for Degenerate Parabolic Operators with Applications* P. Cannarsa,P. Martinez,J. Vancostenoble,2016-01-25 Degenerate parabolic operators have received increasing attention in recent years because they are associated with both important theoretical analysis such as stochastic diffusion processes and interesting applications to engineering physics biology and economics This manuscript has been conceived to introduce the reader to global Carleman estimates for a class of parabolic operators which may degenerate at the boundary of the space domain in the normal direction to the boundary Such a kind of degeneracy is relevant to study the invariance of a domain with respect to a given stochastic diffusion flow and appears naturally in climatology models On the Singular Set of Harmonic Maps into DM-Complexes Georgios Daskalopoulos,Chikako Mese,2016-01-25 The authors prove that the singular set of a harmonic map from a smooth Riemammian domain to a Riemannian DM complex is of Hausdorff codimension at least two They also explore monotonicity formulas and an order gap theorem for approximately harmonic maps These regularity results have applications to rigidity problems examined in subsequent articles *Reduced Fusion Systems over 2-Groups of Sectional Rank at Most 4* Bob Oliver,2016-01-25 The author classifies all reduced indecomposable fusion systems over finite groups of sectional rank at most The resulting list is very similar to that by Gorenstein and Harada of all simple groups of sectional rank at most But this

method of proof is very different from theirs and is based on an analysis of the essential subgroups which can occur in the fusion systems **Pathways to Reform** Alexandra W. Logue,2017-09-08 A personal account of the implementation of a controversial credit transfer program at the nation s third largest university Change is notoriously difficult in any large organization Institutions of higher education are no exception From 2010 to 2013 Alexandra Logue then chief academic officer of The City University of New York led a controversial reform initiative known as Pathways The program aimed to facilitate the transfer of credits among the university s nineteen constituent colleges in order to improve graduation rates a long recognized problem for public universities such as CUNY Hotly debated Pathways met with vociferous resistance from many faculty members drew the attention of local and national media and resulted in lengthy legal action In Pathways to Reform Logue the figure at the center of the maelstrom blends vivid personal narrative with an objective perspective to tell how this hard fought plan was successfully implemented at the third largest university in the United States Logue vividly illustrates why change does or does not take place in higher education and the professional and personal tolls exacted Looking through the lens of the Pathways program and factoring in key players she analyzes how governance structures and conflicting interests along with other institutional factors impede change which Logue shows is all too rare slow and costly In this environment she argues it is shared governance combined with a strong central decision making authority that best facilitates necessary reform Logue presents a compelling investigation of not only transfer policy but also power dynamics and university leadership Shedding light on the inner workings of one of the most important public institutions in the nation Pathways to Reform provides the first full account of how despite opposition a complex higher education initiative was realized All net royalties received by the author from sales of this book will be donated to The City University of New York to support undergraduate student financial aid **Medial/Skeletal Linking Structures for Multi-Region Configurations** James Damon,Ellen Gasparovic,2018-01-16 The authors consider a generic configuration of regions consisting of a collection of distinct compact regions in which may be either regions with smooth boundaries disjoint from the others or regions which meet on their piecewise smooth boundaries in a generic way They introduce a skeletal linking structure for the collection of regions which simultaneously captures the regions individual shapes and geometric properties as well as the positional geometry of the collection The linking structure extends in a minimal way the individual skeletal structures on each of the regions This allows the authors to significantly extend the mathematical methods introduced for single regions to the configuration of regions Mindsets for Parents Mary Cay Ricci,Margaret Lee,2023-12-19 All parents want their children to be successful but success is not just about giving your kids praise or setting them on the right direction Research shows that success is often dependent on mindset That s where the updated edition of Mindsets for Parents comes in Designed to provide a roadmap for developing a growth mindset home environment this book s conversational style and real world examples make the popular mindsets topic approachable and engaging It includes tools for informally assessing the mindsets

of both parent and child easy to understand updated brain research brand new examples and prompts for self reflection as well as suggested strategies and resources for use with children of any age Also included in this updated edition are book club questions designed to get parent groups thinking and collaborating in order to make the most of these strategies This book gives parents guardians coaches caregivers and anyone who works with children powerful knowledge and methods to help themselves and their children learn to embrace life s challenges with a growth mindset and an eye toward increasing their effort and success **Images of Italian Mathematics in France** Frédéric Brechenmacher,Guillaume Jouve,Laurent Mazliak,Rossana Tazzioli,2016-10-13 The contributions in this proceedings volume offer a new perspective on the mathematical ties between France and Italy and reveal how mathematical developments in these two countries affected one another The focus is above all on the Peninsula s influence on French mathematicians counterbalancing the historically predominant perception that French mathematics was a model for Italian mathematicians In the process the book details a subtle network of relations between the two countries where mathematical exchanges fit into the changing and evolving framework of Italian political and academic structures It reconsiders the issue of nationalities in all of its complexity an aspect often neglected in research on the history of mathematics The works in this volume are selected contributions from a conference held in Lille and Lens France in November 2013 on Images of Italian Mathematics in France from Risorgimento to Fascism The authors include respected historians of mathematics philosophers of science historians and specialists for Italy and intellectual relations ensuring the book will be of great interest to their peers **Disability Rights and Religious Liberty in Education** Bruce J. Dierenfield,David A. Gerber,2020-07-06 In 1988 Sandi and Larry Zobrest sued a suburban Tucson Arizona school district that had denied their hearing impaired son a taxpayer funded interpreter in his Roman Catholic high school The Catalina Foothills School District argued that providing a public resource for a private religious school created an unlawful crossover between church and state The Zobrests however claimed that the district had infringed on both their First Amendment right to freedom of religion and the Individuals with Disabilities Education Act IDEA Bruce J Dierenfield and David A Gerber use the Zobrests story to examine the complex history and jurisprudence of disability accommodation and educational mainstreaming They look at the family s effort to acquire educational resources for their son starting in early childhood and the choices the Zobrests made to prepare him for life in the hearing world rather than the deaf community Dierenfield and Gerber also analyze the thorny church state issues and legal controversies that informed the case its journey to the U S Supreme Court and the impact of the high court s ruling on the course of disability accommodation and religious liberty *Dynamics Near the Subcritical Transition of the 3D Couette Flow II: Above Threshold Case* Jacob Bedrossian,Pierre Germain,Nader Masmoudi,2022-08-31 View the abstract How the Brain Learns David A. Sousa,2022-01-14 This book shows educators how to deliver game changing and brain changing results for students In this edition the author translates new insights and evolving research into concrete actions and strategies for the classroom

Lie Theory and Its Applications in Physics Vladimir Dobrev,2023-01-29 This volume presents modern trends in the area of symmetries and their applications based on contributions to the Workshop Lie Theory and Its Applications in Physics held in Sofia Bulgaria on line in June 2021 Traditionally Lie theory is a tool to build mathematical models for physical systems Recently the trend is towards geometrization of the mathematical description of physical systems and objects A geometric approach to a system yields in general some notion of symmetry which is very helpful in understanding its structure Geometrization and symmetries are meant in their widest sense i e representation theory algebraic geometry number theory infinite dimensional Lie algebras and groups superalgebras and supergroups groups and quantum groups noncommutative geometry symmetries of linear and nonlinear partial differential operators special functions and others Furthermore the necessary tools from functional analysis are included This is a big interdisciplinary and interrelated field The topics covered in this Volume are the most modern trends in the field of the Workshop Representation Theory Symmetries in String Theories Symmetries in Gravity Theories Supergravity Conformal Field Theory Integrable Systems Quantum Computing and Deep Learning Entanglement Applications to Quantum Theory Exceptional quantum algebra for the standard model of particle physics Gauge Theories and Applications Structures on Lie Groups and Lie Algebras This book is suitable for a broad audience of mathematicians mathematical physicists and theoretical physicists including researchers and graduate students interested in Lie Theory **Naturality and Mapping Class Groups in Heegard Floer Homology** András Juhász,Dylan P. Thurston,Ian Zemke,2021-12-09 View the abstract The Effects of Noise on Aquatic Life Arthur N. Popper,Joseph A. Sisneros,Anthony D. Hawkins,Frank Thomsen,2024-10-03 In this landmark new work the major authorities in the field from around the world present a wealth of research data coverage of regulatory issues and thinking about the effects of man made noise on marine mammals turtles amphibians fishes and invertebrates The various themes of the book were chosen to cover the wide range of basic and cutting edge information on this topic They include the hearing abilities of aquatic animals communication by means of underwater sound the description of aquatic soundscapes different sound sources and their characteristics the effects of sound on behavior and assessing mitigating and monitoring the effects of aquatic noise Emphasis is on the cross fertilization of ideas and findings across species and noise sources With over 140 contributions from leading researchers the sources of underwater sound and their effects are discussed in detail *Quantum Theory and Symmetries with Lie Theory and Its Applications in Physics Volume 1* Vladimir Dobrev,2018-11-28 This book is the first volume of proceedings from the joint conference X International Symposium Quantum Theory and Symmetries QTS X and XII International Workshop Lie Theory and Its Applications in Physics LT XII held on 19 25 June 2017 in Varna Bulgaria The QTS series was founded on the core principle that symmetries underlie all descriptions of quantum systems It has since evolved into a symposium at the forefront of theoretical and mathematical physics The LT series covers the whole field of Lie theory in its widest sense together with its applications in many areas of physics As an interface between mathematics and physics

the workshop serves as a meeting place for mathematicians and theoretical and mathematical physicists In dividing the material between the two volumes the Editor has sought to select papers that are more oriented toward mathematics for the first volume and those focusing more on physics for the second However this division is relative since many papers are equally suitable for either volume The topics addressed in this volume represent the latest trends in the fields covered by the joint conferences representation theory integrability entanglement quantum groups number theory conformal geometry quantum affine superalgebras noncommutative geometry Further they present various mathematical results on minuscule modules symmetry breaking operators Kashiwara crystals meta conformal invariance the superintegrable Zernike system

A Morse-Bott Approach to Monopole Floer Homology and the Triangulation Conjecture Francesco Lin,2018-10-03 In the present work the author generalizes the construction of monopole Floer homology due to Kronheimer and Mrowka to the case of a gradient flow with Morse Bott singularities Focusing then on the special case of a three manifold equipped equipped with a structure which is isomorphic to its conjugate the author defines the counterpart in this context of Manolescu s recent Pin 2 equivariant Seiberg Witten Floer homology In particular the author provides an alternative approach to his disproof of the celebrated Triangulation conjecture   **IX Hotine-Marussi Symposium on Mathematical Geodesy** Pavel Novák,Mattia Crespi,Nico Sneeuw,Fernando Sansò,2020-09-16 This volume gathers the proceedings of the IX Hotine Marussi Symposium on Mathematical Geodesy which was held from 18 to 22 June 2018 at the Faculty of Civil and Industrial Engineering Sapienza University of Rome Italy Since 2006 the Hotine Marussi Symposia series has been produced under the auspices of the Inter Commission Committee on Theory ICCT within the International Association of Geodesy IAG The ICCT has organized the last four Hotine Marussi Symposia held in Wuhan 2006 and Rome 2009 2013 and 2018 The overall goal of the ICCT and Hotine Marussi Symposia has always been to advance geodetic theory as reflected in the 25 peer reviewed research articles presented here The IX Hotine Marussi Symposium was divided into 10 topical sessions covering all aspects of geodetic theory including reference frames gravity field modelling adjustment theory atmosphere time series analysis and advanced numerical methods In total 118 participants attended the Symposium and delivered 82 oral and 37 poster presentations During a special session at the Accademia Nazionale deiLincei the oldest scientific academy in the world six invited speakers discussed interactions of geodesy with oceanography glaciology atmospheric research mathematics Earth science and seismology   <u>Bordered Heegaard Floer Homology</u> Robert Lipshitz,Peter Ozsváth,Dylan P. Thurston,2018-08-09 The authors construct Heegaard Floer theory for 3 manifolds with connected boundary The theory associates to an oriented parametrized two manifold a differential graded algebra For a three manifold with parametrized boundary the invariant comes in two different versions one of which type D is a module over the algebra and the other of which type A is an A module Both are well defined up to chain homotopy equivalence For a decomposition of a 3 manifold into two pieces the A tensor product of the type D module of one piece and the type A module from the other piece is HF of

the glued manifold As a special case of the construction the authors specialize to the case of three manifolds with torus boundary This case can be used to give another proof of the surgery exact triangle for HF The authors relate the bordered Floer homology of a three manifold with torus boundary with the knot Floer homology of a filling
