*The Impact of Learning to Read on Visual Processing* Tânia Fernandes,Regine Kolinsky,2016-01-26 Reading is at the interface between the vision and spoken language domains An emergent bulk of research indicates that learning to read strongly impacts on non linguistic visual object processing both at the behavioral level e g on mirror image processing enantiomorphy and at the brain level e g inducing top down effects as

well as neural competition effects Yet many questions regarding the exact nature locus and consequences of these effects remain hitherto unanswered The current Special Topic aims at contributing to the understanding of how such a cultural activity as reading might modulate visual processing by providing a landmark forum in which researchers define the state of the art and future directions on this issue We thus welcome reviews of current work original research and opinion articles that focus on the impact of literacy on the cognitive and or brain visual processes In addition to studies directly focusing on this topic we will consider as highly relevant evidence on reading and visual processes in typical and atypical development including in adult people differing in schooling and literacy as well as in neuropsychological cases e g developmental dyslexia We also encourage researchers on nonhuman primate visual processing to consider the potential contribution of their studies to this Special Topic

Interdisciplinary Approaches to Multilingualism Suzanne Curtin, Mary Grantham O'Brien, Rahat Naqvi, 2015-07-16 This research topic stems from the Interdisciplinary Approaches to Multilingualism conference which was hosted by the Language Research Centre at the University of Calgary It was the first conference of its kind which brought together the work of researchers educators and policy makers in the areas of first and second language acquisition from psycholinguistic and pedagogical perspectives The goal was to provide an opportunity for participants to engage with the implications of multilingualism from a range of perspectives including the effects of being bilingual from infancy to adulthood the process and benefits of learning multiple languages and the impact of multilingualism on society

**Plant cell wall in pathogenesis, parasitism and symbiosis** Vincenzo Lionetti, Jean-Pierre Metraux, 2015-03-13 The cell wall is a complex structure mainly composed of cellulose microfibrils embedded in a cohesive hemicellulose and pectin matrix Cell wall structural proteins enzymes and their inhibitors are also essential components of plant cell walls They are involved in the cross link of cell wall polysaccharides wall structure and the perception and signaling of defense related elicitors at the cell surface In the outer part of the epidermal cells the polysaccharides are coated by the cuticle consisting of hydrophobic cutin suberin and wax layers Lignin a macromolecule composed of highly cross linked phenolic molecules is a major component of the secondary cell wall The cell wall is the first cell structure on which interactions between plants and a wide range of other organisms including insects nematodes pathogenic or symbiotic micro organisms take place It not only represents a barrier that limits access to the cellular contents that provide a rich nutrient source for pathogens but serves as a source of elicitors of plant defense responses released upon partial enzymatic degradation of wall polysaccharides during infection Modification of the plant cell wall can also occur at the level of plasmodesmata during virus infection as well as during abiotic stresses The fine structure and composition of the plant cell wall as well as the regulation of its biosynthesis can thus strongly influence resistance and susceptibility to pathogens This Research Topic provides novel insights and detailed overviews on the dynamics of the plant cell wall in plant defence parasitism and symbiosis and describes experimental approaches to study plant cell wall modifications occurring during interaction of plants with different organisms

**Thyroid Hormone in Brain**

**and Brain Cells** Frédéric Flamant, Juan Bernal, Noriyuki Koibuchi, 2016-01-21 Thyroid hormone signaling has been known for a long time to be required for proper neurodevelopment and the maintenance of cognitive functions in the adult brain As thyroid hormone excess or deficiency is usually well handled by clinicians research dedicated to the neural function of thyroid hormone have not been a priority within the field This is changing mainly for two reasons First new genetic diseases have been discovered altering thyroid hormone signaling in brain THRA MCT8 SBP2 with neurodevelopmental consequences which are currently incurable Second there is a growing concern that exposition of the general population to environmental chemicals able to interfere with thyroid hormone signaling compromises children neurodevelopment or induces central disorders in adults Finally thyroid hormone is acting directly on gene transcription by binding nuclear receptors and therefore is an interesting entry point to identify genetic programs controlling brain development and function Reaching a broad understanding of the multiple processes involving thyroid hormone in brain is a tremendous task which will necessitate a multidisciplinary approach animal genetics molecular biology brain imaging developmental biology genomics etc This topic will be the occasion to combine recent contributions in the field and to identify priorities for future investigations Due to devastating consequences of congenital hypothyroidism the neurodevelopmental consequences of altered thyroid hormone signaling have been extensively studied over the years The discovery of new genetic diseases the concern about the possible neurotoxicity of environmental thyroid hormone disruptors recently renewed the interest for an important research field This Ebook gathers reviews and original data from experts in various disciplines It provides a broad view of ongoing research and outlines key issues for future investigation Consumer Affairs and Customer Care Sri Ram Khanna, Savita

Hanspal, 2020-09-21 The subject of this book explains the social framework of consumer rights and legal framework of protecting consumer rights that has evolved in India over the last three decades It also explains the momentous changes in Indian consumer markets over this period as a result of economic liberalisation and provides an understanding of the problems consumers face in markets and the consumer detriment there from It analyses the buying behavior of consumers as well as the phenomena of consumer complaints and the processes and systems to address them The development of the consumer jurisprudence in settling consumer disputes in consumer courts under the Consumers Protection Act of 1986 and 2019 is examined in detail Leading cases are used to explain important concepts It also addresses the role played by quality and standardization in the market place and the roles of different agencies in establishing product and service standards The student should be able to comprehend the business firms interface with consumers and the consumer related regulatory and business environment for major consumer industries of India **Regulation and targeting of enzymes mediating**

**Parkinson's disease pathogenesis: focus on Parkinson's disease Kinases, GTPases and ATPases** Jean-Marc

Taymans, Veerle Baekelandt, Kirsten Harvey, 2015-02-11 Understanding the molecular pathogenesis of Parkinson s disease PD is a priority in biomedical research and a pre requisite to improve early disease diagnosis and ultimately to developing

disease modifying strategies In the past decade and a half geneticists have identified several genes that are involved in the molecular pathogenesis of PD They not only identified gene variants segregating with familial forms of PD but also genetic risk factors of sporadic PD via genome wide association studies GWAS Understanding how PD genes and their gene products function holds the promise of unraveling key PD pathogenic processes Therefore the precise cellular role of PD proteins is currently the subject of intense investigation Interestingly a number of PD proteins have enzymatic functions including kinase GTPase or ATPase functions In the context of understanding disease pathogenesis or developing disease modifying therapies enzymes possess several useful features Firstly enzymes are often key elements of cellular signaling networks acting as on off switches to determine signaling intensity For instance kinases mediate phosphorylation events which activate or inactivate their substrates while GTPases modulate activity of their effector proteins via direct interaction in a GDP GTP dependent manner ATPases also control cellular processes through their involvement in cellular energy production and or in transmembrane transport Secondly enzymes are attractive targets for therapeutics development This is exemplified by the growing number of kinase inhibitors approved for clinical use while compounds modulating GTPases or ATPases have also been proposed as potential therapeutics Finally as elements in cellular signaling networks enzymes are not generally constitutively active but subject to further regulation through additional signaling components Knowledge of how PD kinases GTPases and ATPases are activated or inactivated can aid in understanding how PD signaling networks are deregulated in disease and point to new possibilities in targeting pathological signaling processes The objective of this research topic is to provide an overview of current knowledge on the regulation of cellular signaling networks of PD kinases GTPases and ATPases Both upstream and downstream signaling events will be covered with a focus on molecular events that can readily be monitored relevance as disease biomarkers and have a potential to be modulated relevance as potential therapeutic target

### **Chemokines and Chemokine Receptors in Brain Homeostasis** Flavia Trettel, Richard M. Ransohoff, 2015-08-17

Virtually involved in all pathologies that present an inflammatory component it is now evident that in the central nervous system chemokines and chemokine receptors possess pleiotropic properties beyond chemotaxis constitutive brain expression of chemokines and their receptors on endothelial cells but also on neurons and glia suggests a role for such molecules in mediating homeostatic cross talk between cells of the brain perenchyma Cross talk between neurons and glia is determinant to the establishment and maintenance of a brain environment that ensure normal function and in particular glial cells are active players that respond to environmental changes and act for the survival growth differentiation and repair of the nervous tissue in this regard brain endogenous chemokines represent key molecules that play a role in brain development neurogenesis neurotransmission and neuroprotection As important regulators of peripheral immune response chemokines are molecules of the immune system that play a central role in coordinating communication between the nervous and the immune systems in the context of infections and brain injury Indeed in pathological processes resulting from infections brain

trauma ischemia and chronic neurodegenerative diseases chemokines represent important neuroinflammatory mediators that drive leucocytes trafficking into the central nervous system facilitating an immune response by targeting cells of the innate and adaptive immune system The third edition of the international conference Chemokines and Chemokine Receptors in the Nervous System held in Rome in October 2013 represented an exciting platform to promote discussion among researchers in different disciplines to understand the role of chemokines in brain homeostasis This Frontiers Research Topic arises from this conference and wants to be an opportunity to further discuss and highlight the importance of brain chemokines as key molecules that not only grant the interplay between the immune and the nervous systems but in addition drive modulatory functions on brain homeostasis orchestrating neurons microglia and astrocytes communication Handbook of Generation IV Nuclear Reactors Igor Pioro, 2022-12-07 Handbook of Generation IV Nuclear Reactors Second Edition is a fully revised and updated comprehensive resource on the latest research and advances in generation IV nuclear reactor concepts Editor Igor Pioro and his team of expert contributors have updated every chapter to reflect advances in the field since the first edition published in 2016 The book teaches the reader about available technologies future prospects and the feasibility of each concept presented equipping them users with a strong skillset which they can apply to their own work and research Provides a fully updated revised and comprehensive handbook dedicated entirely to generation IV nuclear reactors Includes new trends and developments since the first publication as well as brand new case studies and appendices Covers the latest research developments and design information surrounding generation IV nuclear reactors *The Paradox of Urban Revitalization* Howard Gillette, Jr., 2022-06-07 In the twenty first century cities in the United States that had suffered most the shift to a postindustrial era entered a period widely proclaimed as an urban renaissance From Detroit to Newark to Oakland and elsewhere commentators saw cities rising again Yet revitalization generated a second urban crisis marked by growing inequality and civil unrest reminiscent of the upheavals associated with the first urban crisis in the mid twentieth century The urban poor and residents of color have remained very much at a disadvantage in the face of racially biased capital investments narrowing options for affordable housing and mass incarceration In profiling nine cities grappling with challenges of the twenty first century author Howard Gillette Jr evaluates the uneven efforts to secure racial and class equity as city fortunes have risen Charting the tension between the practice of corporate subsidy and efforts to assure social justice The Paradox of Urban Revitalization assesses the course of urban politics and policy over the past half century before the COVID 19 pandemic upended everything and details prospects for achieving greater equity in the years ahead *Immune Interactions during the Reproductive Cycle* Sinuhe Hahn, Stavros Giaglis, 2015-07-03 Mammalian pregnancy represents a unique immunological riddle in that the mother does not reject her allogeneic fetus In part this is largely due to a general sequestration or diminution of T cell activity and an increased involvement of the innate immune system The field of immunology is concerned primarily with how innate and adaptive mechanisms collaborate to protect vertebrates from

infection Although many cellular and molecular actors have evidently important roles antibodies and lymphocytes are considered to be the principal players Yet despite their importance it would be definitely simplistic to conclude that they are solely essential for immunity overall A major distinction between adaptive and innate immunity is the spontaneity of the innate immune response which utilizes an already pre existing but limited repertoire of responding modules The slower onset of adaptive immunity compensates by its ability to recognize a much broader repertoire of foreign substances and also by its power to constantly improve during a response whereas innate immunity remains relatively unaffected The interactions between the reproductive system and the immune system are of particular interest since the reproductive system is unique in that its primary role is to assure the continuity of the species while the immune system provides internal protection and thus facilitates continued health and survival The modus operandi of these two morphologically diffuse systems involves widely distributed chemical signals in response to environmental input and both systems must interact for the normal functioning of each Furthermore dysregulation of normal physiological interactions between the reproductive and immune systems can lead to severe pregnancy related disorders or complications On the other hand by ameliorating auto inflammatory conditions such as MS and RA pregnancy may provide a unique insight into novel immune modulatory strategies The scientific focus on reproductive immune research has historically provided substantial insight into the interface between these two physiological systems A translational research approach would involve a tight interaction between diverse scientific and clinical disciplines including immunology obstetrics haematology haemostasis and endocrinology With so much recent progress in the field we believe that it is valuable and well timed to review the broad variety of the relevant physiologic and pathologic aspects from menstruation to fertilization and implantation and from placentation and pregnancy per se to the post partum condition in which the immune system takes part We are looking forward to a wide and vivid discussion of these and related issues and we sincerely expect that our readers profoundly benefit from new exciting insights and fruitful collaborations

Public Budgeting in Search for an Identity Maria Francesca Sicilia,Ileana Steccolini,2020-12-27 Public Budgeting in Search for an Identity State of the Art and Future Challenges provides a state of the art reflection on current trends in international public budgeting representing an important pillar in the accumulation of knowledge on public sector budgeting processes contents evolutions and critical issues Budgeting is central in public sector organizations It performs a complex variety of functions being the arena where multiple actors cultures and professional identities interact making it an extremely fascinating field and topic of investigation There is a significant need and scope for exploring budgeting processes in the public sector today as a consequence of the managerial waves of reforms that have taken place over the last few decades and the implementation of austerity programmes as well as in light of current trends including emerging challenges related to community care and wellbeing rising inequality people flows climate change pandemics and the persistence of democratic deficits The chapters in this volume address critical issues on this broad topic offering new perspectives on

current evolutions in public budgeting including among others participatory budgeting performance budgeting the budgetary slack resources and the need to ensure balance between budget control and flexibility These contributions show that public budgeting can and must remain the subject of enduring interest in our studies The chapters in this book were originally published as a special issue of Public Management Review

**Towards an embodied science of intersubjectivity: Widening the scope of social understanding research** Ezequiel Di Paolo, Hanne De Jaegher, 2015-06-16 An important amount of research effort in psychology and neuroscience over the past decades has focused on the problem of social cognition This problem is understood as how we figure out other minds relying only on indirect manifestations of other people's intentional states which are assumed to be hidden private and internal Research on this question has mostly investigated how individual cognitive mechanisms achieve this task A shift in the internalist assumptions regarding intentional states has expanded the research focus with hypotheses that explore the role of interactive phenomena and interpersonal histories and their implications for understanding individual cognitive processes This interactive expansion of the conceptual and methodological toolkit for investigating social cognition we now propose can be followed by an expansion into wider and deeply related research questions beyond but including that of social cognition narrowly construed Our social lives are populated by different kinds of cognitive and affective phenomena that are related to but not exhausted by the question of how we figure out other minds These phenomena include acting and perceiving together verbal and non verbal engagement experiences of disconnection management of relations in a group joint meaning making intimacy trust conflict negotiation asymmetric relations material mediation of social interaction collective action contextual engagement with socio cultural norms structures and roles etc These phenomena are often characterized by a strong participation by the cognitive agent in contrast with the spectatorial stance typical of social cognition research We use the broader notion of embodied intersubjectivity to refer to this wider set of phenomena This Research Topic aims to investigate relations between these different issues to help lay strong foundations for a science of intersubjectivity the social mind writ large To contribute to this goal we encouraged contributions in psychology neuroscience psychopathology philosophy and cognitive science that address this wider scope of intersubjectivity by extending the range of explanatory factors from purely individual to interactive from observational to participatory

*Levodopa-induced Dyskinesias in Parkinson's Disease: Current Knowledge and Future Scenarios* Antonio Cerasa, Giacomo Koch, Alfonso Fasano, Francesca Morgante, 2015-05-13 This topic aims to pool the most recent advances in the phenomenology and pathophysiology of levodopa induced dyskinesias The papers in this eBook have strongly contributed to reduce the gaps in our knowledge of LIDs pathogenesis [Roles and mechanisms of parasitism in aquatic microbial communities](#) Télesphore Sime-Ngando, Kevin D. Lafferty, David G. Biron, 2015-07-24 Next Generation Sequencing technologies are increasingly revealing that microbial taxa likely to be parasites or symbionts are probably much more prevalent and diverse than previously thought Every well studied free living species has parasites parasites themselves can be parasitized As a rule of thumb there is an estimated 4 parasitic species for any given host and the better a host is studied the more parasites are known to infect it Therefore parasites and other symbionts should represent a very large number of species and may far outnumber those with free living lifestyles Paradoxically free living hosts which form the bulk of our knowledge of biology may be a minority Microbial parasites typically are characterized by their small size short generation time and high rates of reproduction with simple life cycle occurring generally within a single host They are diverse and ubiquitous in the environment comprising viruses prokaryotes and eukaryotes This Frontiers Research Topic sought to provide a broad overview but concise comprehensive well referenced and up to date state of the art for everyone involved with microbial parasites in aquatic microbial ecology
