AW Chickering

Military Skills Development System 2016 Application Form:

South Africa's Post-Apartheid Military Lindy Heinecken, 2020-01-01 This timely book examines how the South African National Defence Force has adapted to the country's new security political and social environment since 1994. In South Africa's changed political state, how has civilian control of the military been implemented and what does this mean for defence in a democracy? This book presents an overview of the security environment, how the mission focus of the military has changed and the implications for force procurement, force preparation, force employment and force sustainability. The author addresses other issues such as the effect of integrating former revolutionary soldiers into a professional armed force, the effect of affirmative action on meritocracy, recruitment and retention, military veterans looking at the difficulties they face in reintegrating back into society and finding gainful employment, gender equality and mainstreaming the rise of military unions and why a confrontational instead of a more corporatist approach to labour relations has emerged. HIV/AIDS and the consequences this holds for the military in terms of its operational effectiveness. In closing, the author highlights key events that have caused the SANDF to become lost in transition and transformation, spelling out some lessons learned. The conclusions she draws are pertinent for the future of defence security and civil military relations of countries around the world. **Annual Report** South Africa. Department of Defence, 2016

Macro cognition: The Science and Engineering of Sociotechnical Work Systems Paul Ward,Robert R. Hoffman,Gareth E. Conway,Jan Maarten Schraagen,David Peebles,Robert J. B. Hutton,Erich J. Petushek,2018-02-28 The increasing complexity of work systems and changes in the nature of workplace technology over the past century have resulted in an exponential shift in the nature of work activities from physical labor to cognitive work Modern work systems have many characteristics that make them cognitively complex They can be highly interactive comprised of multiple agents and artifacts information may be limited and distributed across space and time task goals are frequently ill defined conflicting dynamic and emergent planning may only be possible at general levels of abstraction or require adaptive solutions some degree of proficiency or expertise is required the stakes are often high and uncertainty time constraints and stress are seldom absent To complicate matters further cognition in complex work settings is typically constrained by broader professional organizational and institutional practice and policy These features of cognitive work present significant

challenges to scientific methodology and theory and subsequent design of reliable interventions Historically philosophers and scientists have attempted to understand the mental activities experienced during cognitive work at multiple levels of analysis using divergent methods Some have examined cognition at an associative contextual functional or holistic level relying on naturalistic methods to understand the higher mental processes as they work in harmony during goal directed behavior Others have embraced experimental methods and favored internal over external validity often reducing cognition to a psychology of fundamental acts such as short term memory access with millisecond shifts in attention More recently Macro cognition has evolved as a complementary paradigm Macro cognitive researchers have studied the cognitive functions and processes associated with skilled adaptive collaborative and resilient cognitive work in the context of the aforementioned complexities of psychotechnical and sociotechnical work systems Typically this research has been carried out using cognitive task analytic techniques that draw on both naturalistic and quasi experimental methods The primary goals of research in Macro cognition are to better understand cognitive adaptations to complexity to increase our theoretical understanding of the organism environment relations by studying the mapping between cognitive work and real world demands and to promote use inspired research capable of improving system performance

Reunification Family Therapy Jan Faust, 2017-12-20 A unique evidence-based treatment manual for repairing parent-child relationships. Childhood problems are often related to and worsened by the disintegration of the family structure, whether through parental separation and divorce, military service, or incarceration. Reunification therapy is a therapeutic process incorporating different empirically based methods: CBT, humanistic, and systemic, to help repair relationships between parents and children and restore not only physical contact but also meaningful social, emotional, and interpersonal exchanges between parents and children. This unique manual, bringing together the vast experience of the author, outlines the many situations numerous families currently face and why the need for reunification therapy exists. The therapist works firstly with the individual family members and then with all the family in conjoint sessions. The manual expertly guides clinicians through pretreatment decisions and processes to enable them to decide where, when, and in what form reunification therapy is appropriate, taking into account ethical, legal, and special family issues. Detailed chapters outline the structure and issues for the individual and conjoint sessions, as well as a step-by-step treatment plan template. Additional tools in the Appendix enable clinicians to monitor and effectuate change.

Handbook of Research on Cross-Disciplinary Uses of Gamification in Organizations Bernardes, Oscar, Amorim, Vanessa, Moreira, António

Carrizo, 2022-01-28 Gaming is increasingly prevalent in our society and everyday lives as a form of leisure or competition. The typical aim of gaming is to gain a pleasant experience from the game. Because of the saturation of gaming in global society, the gamification concept and its operationalization in non-gaming contexts has become a growing practice. This technological novelty is the basis for an innovative change in many types of environments such as education, commerce, marketing, work,

health governance and sustainability among others The service sector especially has shown widespread adoption of the method as it seeks to increase and motivate audiences and promote brands However little research is available on the adoption of gamification in organizations leading to a need for literature that investigates best practices for utilization and implementation The Handbook of Research on Cross Disciplinary Uses of Gamification in Organizations is a comprehensive and timely reference book that explores the field of gamification for economic and social development This book provides dynamic research from this emerging field Covering topics such as distance learning health behaviors and workplace training this book is a valuable reference for researchers marketing managers students managers executives software developers IT specialists technology developers faculty of P 12 and higher education teachers professors government officials and academicians Supporting Personalized Learning and Students' Skill Development With AI Khaldi, Mohamed,2025-03-05
