Loofa Love

Showers are both a place and an activity. They are where people wake themselves up to begin the day anew or where they wash the sweat and grime of a rough day off their bodies. Showers are an essential part of basic health and hygiene. With that comes a countless array of tools for proper cleanliness, but none come quite as close as the loofa to pure perfection. Based on cleaning ability, personal comfort, and usability, the loofa is the most effective and efficient body cleaning implement in any shower caddy.

Personal comfort is an admittedly subjective quality for anyone. However, the audience has a general understanding of a comfort range. Where scrubby cloths are harsh and even painful to more sensitive skin, other washing implements feel as though they are only pushing grime around the epidermis. The loofa succeeds in its ability to create a rich lather for a smooth, satisfying feeling while still maintaining an effective cleaning ability, ensuring that a bather feels good both during and after usage.

While humble in its roots, the loofa is an ideal cleaning tool that epitomizes cleaning ability, comfort, and ease of use into one amazing package. As bathing has only grown in importance in relation to hygiene and health, technology has maintained steady in the tools involved with the process. While the loofa may see some evolution in form at some point in the future, the tool's current iteration suggests a superior form that requires no true improvement.

Beyond open access: visions for open evaluation of scientific papers by post-publication peer review Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2-4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in Open access is now widely accepted as desirable and is slowly beginning to become a reality However the second essential element evaluation has received less attention Open evaluation an ongoing post publication process of transparent peer review and rating of papers promises to address the problems of the current system However it is unclear how exactly such a system should be designed The evaluation system steers the attention of the scientific community and thus the very course of science For better or worse the most visible papers determine the direction of each field and guide funding and public policy decisions Evaluation therefore is at the heart of the entire endeavor of science As the number of scientific publications explodes evaluation and selection will only gain importance A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention So far scientists have left the design of the evaluation process to journals and publishing companies However the steering mechanism of science should be designed by scientists The cognitive computational and brain sciences are best prepared to take on this task which will involve social and psychological considerations software design and modeling of the network of scientific papers and their interrelationships This Research Topic in Frontiers in Computational Neuroscience collects visions for a future system of open evaluation Because critical arguments about the current system abound these papers will focus on constructive ideas and comprehensive designs for open evaluation systems Design decisions include Should the reviews and ratings be entirely transparent or should some aspects be kept secret Should other information such

as paper downloads be included in the evaluation How can scientific objectivity be strengthened and political motivations weakened in the future system Should the system include signed and authenticated reviews and ratings Should the evaluation be an ongoing process such that promising papers are more deeply evaluated How can we bring science and statistics to the evaluation process e g should rating averages come with error bars How should the evaluative information about each paper e g peer ratings be combined to prioritize the literature Should different individuals and organizations be able to define their own evaluation formulae e g weighting ratings according to different criteria How can we efficiently transition toward the future system Ideally the future system will derive its authority from a scientific literature on community based open evaluation We hope that these papers will provide a starting point
