

HDR

Subject: TMDL Piggyback WQ Testing

Water quality data were collected from the Stockton Deep Water Channel near Weber Point, Stockton, CA. Iso 6700 Auto Samplers were used to collect two sets of samples at two depths within the channel. The samples were taken over a 25-hour period on July 27 and August 3, 2000. Samples were taken from the auto samplers, transferred into appropriate containers, packed in ice and transported to Sequoia Analytical for further analysis. An array of analyses was then performed in order to detect the concentration of the following constituents: nitrogen, ammonia; organic nitrogen; nitrite; ortho-phosphate (dissolved); total phosphorus; and chlorophyll *a*.

The Inco 6700 Auto Samplers were positioned on the edge of a public dock located approximately 900 ft west of Weber Point. The dock extended 150 ft towards the centerline of the channel. This position put the Samplers within 50 ft of the channel centerline.

Sample Collection

Each Sampler was programmed to collect an 1800-ml sample every 2.5 hours over a 25 hour period. Sample Set 1 began on July 27, 2000 at 10:10 am and Sample Set 2 began on August 3, 2000 at 8:30 am. Due to the extremely warm ambient temperatures, these samples were stored in a cooled compartment within the sampler for no more than five hours during the day and no more than 8 hours during the night. Each sample was periodically removed from the Sampler and transferred into four sample bottles that were provided by Sequoia Analytical. These bottles consisted of one 750 ml glass amber colored bottle with no preservative, one 250 ml clear poly bottle with no preservative, and two 250 ml poly bottles containing a small amount of H_2SO_4 as a preservative. Each sample was then placed into a cooler, packed with ice, and stored until the sample set was completed.
