

The learner will be expected to compile a portfolio of evidence based on the research/investigation on a specific topic to depict, sell, demonstrate or advertise the topic. This portfolio will contain all the evidence on the topic that the learner could gather. This should include reports, presentations, photographs, pictures, graphs, sketches, diagrams, etc.

An example of a portfolio of evidence: Evidence of the degradation of the environment.

4.5.2 Project

The **project** will be a piece of work in which knowledge, skills and values which lead towards competence in the specific or integrated content, are demonstrated. The project requires extended reading and writing on the part of the learner. The project will involve thorough investigation into and sourcing information on a selected topic in the curriculum. This could take the form of an interview, observation and making suggestions to improve upon the topic. The objective for the project should be clear and thorough planning should take place, e.g. preparing the questions for an interview. This is followed by the research, and finally the data/ information has to be collated into evidence. The evidence will be in the form of an essay with sub-headings relating to the criteria of the task.

Although learners will spend time outside of contact time to collect resources and information, the completion of the task has to be facilitated by the teacher in class time. The topic and nature of the project will be determined by the content covered according to the annual teaching plan. Learners should be given a project before the end of the second term, after the content related to the project has been addressed, for submission during the third term. Learners will need adequate guidance at the outset of the project and progress should be monitored throughout. All assessment criteria applicable to the project has to be discussed with the learners prior to the commencement of the project.

Examples of a project:

- Community project to address a social or environmental issue
- Investigation of lifestyle choices and their impact on the overall well-being of the South African youth
- Research and apply decision-making skills to challenging situations set in different contexts: a plan of action or advice for long-term success should be provided.

When preparing a project, consider these minimum requirements:

- A cover page
- A table of contents
- Text divided into paragraphs/sections as indicated in the instructions/criteria for the project
- Pictures, photos, diagrams and graphs may be included
- Include a bibliography
- The project should be bound or stapled.

Planning and Analyzing Teaching Angelika Kullberg, Åke Ingerman, Ference Marton, 2024-01-24 Using illustrative teaching case studies this book demonstrates how teaching informed by a learning theory specifically Variation theory can equip teachers to facilitate possibilities for students learning in effective and powerful ways For a long period of time teaching has been black boxed in favour of other explanations of why students learn or not such as motivation and social interaction A large amount of research on teaching and learning not the least made using Variation theory has shown that students often need to experience the same aspects of the focused content or capability in order to learn indicating that relationships between

teaching and learning are not unique or even qualitatively different for every individual and every situation This perspective on the relationship between teaching and learning emphasizes content specific aspects and in that sense structural components of teaching while other aspects of schooling such as social interaction and general well being recede into the background The authors argue for the importance of this in the direct development of teachers independent collective professional knowledge about teaching and the leverage this gives for developing student learning They introduce theoretical tools to help teachers to increase the probability that teaching focusing a specific content or capability is predictive of students learning of that specific content or capability while decreasing contextual dependency without assuming that teaching and learning have a one to one relationship Intended for teachers graduate students in education teacher educators student teachers and researchers this book shows that while there is no simple equation between teaching and learning there are general though content specific aspects of teaching that can be systematically planned and analyzed and used to improve the quality of student learning The Open Access version of this book available at www.taylorfrancis.com has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

Chinatown Unbound , Kay Anderson,Ien Ang,Andrea Del Bono,Donald McNeill,, Alexandra Wong,2019-01-25 Chinatowns are familiar places in almost all major cities in the world In popular Western wisdom the restaurants pagodas and red lanterns are intrinsically equated with a self contained immigrant Chinese district an alien enclave of the East in the West By the 1980s when these Western societies had largely given up their racially discriminatory immigration policies and opened up to Asian immigration the dominant conception of Chinatown was no longer that of an abject ethnic ghetto rather Chinatown was now seen as a positive expression of multicultural heritage and difference By the early 21st century however these spatial and cultural constructions of Chinatown as an other space whether negative or positive have been thoroughly destabilised by the impacts of accelerating globalisation and transnational migration This book provides a timely and much needed paradigm shift in this regard through an in depth case study of Sydney s Chinatown It speaks to the growing multilateral connections that link Australia and Asia and especially China together not just economically but also socially and culturally as a consequence of increasing transnational flows of people money ideas and things Further the book elicits a particular sense of a place in Sydney s Chinatown that of an interconnected world in which Western and Asian realms inhabit each other and in which the orientalist legacy is being reconfigured in new deployments and more complex delimitations As such *Chinatown Unbound* engages with and contributes to making sense of the epochal shift in the global balance of power towards Asia especially China

Practical Oracle SQL Kim Berg Hansen, 2020-02-19 Write powerful queries using as much of the feature-rich Oracle SQL language as possible, progressing beyond the simple queries of basic SQL as standardized in SQL 92. Both standard SQL and Oracle's own extensions to the language have progressed far over the decades in terms of how much you can work with your data in a single, albeit sometimes complex, SQL statement. If you already know the basics of SQL, this book provides many examples of how to write even more advanced SQL to huge benefit in your applications, such as Pivoting rows to columns and columns to rows, Recursion in SQL with MODEL and WITH clauses, Answering Top N questions, Forecasting with linear regressions, Row pattern matching to group or distribute rows, Using MATCH_RECOGNIZE as a row processing engine. The process of starting from simpler statements in SQL and gradually working those statements stepwise into more complex statements that deliver powerful results is covered in each example. By trying out the recipes and examples for yourself, you will put together the building blocks into powerful SQL statements that will make your application run circles around your competitors. What You Will Learn: Take full advantage of advanced and modern features in Oracle SQL; Recognize when modern SQL constructs can help create better applications; Improve SQL query building skills through stepwise refinement; Apply set-based thinking to process more data in fewer queries; Make cross-row calculations with analytic functions; Search for patterns across multiple rows using row pattern matching; Break complex calculations into smaller steps with subquery factoring. Who This Book Is For: Oracle Database developers who already know some SQL but rarely use features of the language beyond the SQL 92 standard; And it is for developers who would like to apply the more modern features of Oracle SQL but don't know where to start. The book also is for those who want to write increasingly complex queries in a stepwise and understandable manner. Experienced developers will use the book to develop more efficient queries using the advanced features of the Oracle SQL language.
