

Exploded View of Wash System

Standard Dry Air Flow

The handle, motor air means the dishwasher through the controls vent causing dry air to be drawn into the unit by way of intake vents located at the bottom of the door. The water in the dishes is evaporated into dry air and the venting process continues. The handle/plunger is turned ON and OFF during the entire drying cycle.

Disengaged and Drive Aid Dispenser

The disengaged and drive aid dispenser is a one piece component consisting of a molded disengaged cup and a built in drive aid dispenser.

The disengaged cup has a spring loaded cover and the drive aid dispenser has a removable cover.

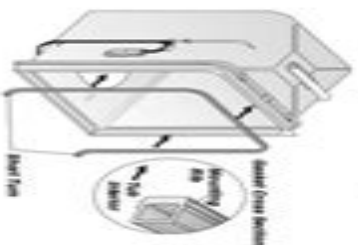

Liquid drive aid is added to the dispenser up to the fill line indicator. The amount of drive aid released can be adjusted by turning the drive aid indicator from one, being the least amount, to two, being the greatest amount.

To replace dispenser:

- disconnect wiring to the actuator,
- remove upper door panel assembly,
- remove the drive aid dispenser,
- replace the dispenser,
- replace and reinstall screws,
- rewire actuator.

Tab and Door Seal

The door seal is pressed into the lip channel for without installing or jamming. The gasket takes an indentation. Center the gasket (pushed on a short bar) at the bottom of the lip channel back to the lip top cover and press in place before ending at the channel end wall.

Pump Assembly

The pump assembly is driven by a synchronous motor. Rotation is in the counter-clockwise direction at 3000 RPM. The motor drives a pump which supplies 100 percent filtered water at a rate of approximately 12 GPM to one spray arm at a time. The spray arm's operation is alternated by a small "pulsator" of the motor during the wash cycle.

The drain hose must have a loop at a minimum height of 22 inches in order to insure proper drainage.

The main pump can easily be removed by disconnecting the upper spray arm supply line hose. The drain pump connects hose, the wiring harness connection made at the circulation motor and drain pump, four connections toward the middle of the wire.

Draining is accomplished by using a small separate synchronous drain pump mounted to the side of the sump. The drain pump is connected to the main pump by a small rubber hose. The drain check valve is located at the discharge end of the drain pump. The drain hose

900 Watt Heater

Water to the cycle cook on the reverse side to definition when the heater is on during the wash cycle. The heater cycles ON and OFF by dual probes during the drying cycle.

Warning: checks of the heater should be made with the timer set in the main wash.

Trouble Shooting Tips

WARNING

Always disconnect the dishwasher from the electrical power source before repairing or replacing components.

Periodic Safety Hazard

Diagnosis and Troubleshooting

Diagnosis	Check the following	Remedy
-----------	---------------------	--------

Diagnosis: The dishwasher is not washing properly. The water is not being heated properly. The water is not being heated properly.
