Autophagy in plants and algae Diane C Bassham,Jose L Crespo,2015-05-15 Autophagy also known as macroautophagy is an evolutionarily conserved

process by which cytoplasmic components are nonselectively enclosed within a double membrane vesicle known as the autophagosome and delivered to the vacuole for degradation of toxic components and recycling of needed nutrients This catabolic process is required for the adequate adaptation and response of the cell and correspondingly the whole organism to different types of stress including nutrient starvation or oxidative damage Autophagy has been extensively investigated in yeasts and mammals but the identification of autophagy related ATG genes in plant and algal genomes together with the characterization of autophagy deficient mutants in plants have revealed that this process is structurally and functionally conserved in photosynthetic eukaryotes Recent studies have demonstrated that autophagy is active at a basal level under normal growth in plants and is upregulated during senescence and in response to nutrient limitation oxidative stress salt and drought conditions and pathogen attack Autophagy was initially considered as a non selective pathway but numerous observations mainly obtained in yeasts revealed that autophagy can also selectively eliminate specific proteins protein complexes and organelles Interestingly several types of selective autophagy appear to be also conserved in plants and the degradation of protein aggregates through specific adaptors or the delivery of chloroplast material to the vacuole via autophagy has been reported This research topic aims to gather recent progress on different aspects of autophagy in plants and algae We welcome all types of articles including original research methods opinions and reviews that provide new insights about the autophagy process and its regulation

A dynamic interplay between membranes and the cytoskeleton critical for cell development and signaling Clément Thomas, Christopher J Staiger, 2014-10-23 Various cellular processes underlying plant development and response to environmental cues rely on a dynamic interplay between membranes and the cytoskeleton e g vesicle and organelle trafficking endocytosis exocytosis and signal transduction In recent years significant progress in the understanding of such interplay has been achieved and several critical links between membranes and the cytoskeleton have been characterized As an example recent work has clarified how auxin promotes the reorganization of cortical actin filaments by the activation of Rho GTPase pathways and how such reorganization in turn locally modifies endocytosis and or exocytosis and directs asymmetric distribution of PIN family of auxin transporters Another recent achievement is the characterization of the Rho and microtubule driven mechanism by which the cell wall architecture is established In particular the elegant work by Oda and Fukuda Science 337 p 1333 2012 provides evidence that secondary wall patterning in xylem vessel primarily relies on two processes a local activation of the plant Rho GTPase ROP11 and a mutual MIDD1 mediated inhibitory interaction between active ROP domains and cortical microtubules Additional examples include recent genetic evidence that microtubule and actin filament interacting regulatory proteins such as MAP65 1 and capping protein function as transducers of membrane lipid signaling into changes in cytoskeleton dynamics and organization This Research Topic aims at collecting a comprehensive set of articles dealing with cellular processes involving membrane cytoskeleton interactions Its scope extends beyond the specific fields defined by the above examples and includes intracellular trafficking host pathogen interactions response to biotic and abiotic stresses and hormonal regulation of growth We hope that this Research Topic will also highlight critical questions that need to be addressed in the future We welcomed Original Research Articles Technical Methodological Advances e g analysis of cytoskeleton dynamics close to membranes Reviews and Mini Reviews that can

expand our understanding of how and why membranes and the cytoskeleton interact Network World ,1998-06-29 For more than 20 years Network World has been the premier provider of information intelligence and insight for network and IT executives responsible for the digital nervous systems of large organizations Readers are responsible for designing implementing and managing the voice data and video systems their companies use to support everything from business critical applications to employee collaboration and electronic commerce **NASA Tech Briefs** ,2016-10 **Countering Cyber Sabotage** Andrew A. Bochman,Sarah Freeman,2021-01-20 Countering Cyber Sabotage Introducing Consequence Driven Cyber Informed Engineering CCE introduces a new methodology to help critical infrastructure owners operators and their security practitioners make demonstrable improvements in securing their most important functions and processes Current best practice approaches to cyber defense struggle to stop targeted attackers from creating potentially catastrophic results From a national security perspective it is not just the damage to the military the economy or essential critical infrastructure companies that is a concern It is the cumulative downstream effects from potential regional blackouts military mission kills transportation stoppages water delivery or treatment issues and so on CCE is a validation that engineering first principles can be applied to the most important cybersecurity challenges and in so doing protect organizations in ways current approaches do not The most pressing threat is cyber enabled sabotage and CCE begins with the assumption that well resourced adaptive adversaries are already in and have been for some time undetected and perhaps undetectable Chapter 1 recaps the current and near future states of digital technologies in critical infrastructure and the implications of our near total dependence on them Chapters 2 and 3 describe the origins of the methodology and set the stage for the more in depth examination that follows Chapter 4 describes how to prepare for an engagement and chapters 5 8 address each of the four phases The CCE phase chapters take the reader on a more granular walkthrough of the methodology with examples from the field phase objectives and the steps to take in each phase Concluding chapter 9 covers training options and looks towards a future where these concepts are scaled more broadly
